Thread: [Magic Bullet Looks/3D Effect](#)

RafSimons - August 31, 2016, 6:27 am

Hello, this will be my first post in the graphic tutorial section. I will be showing you how to use the Magic Bullet plugin for Photoshop. There are many videos online where you can find how to get Magic Bullet on youtube. Apologies for the size of the images.

The first step is choosing which file you wish to apply the effect to.

The next step is selecting all the layers and converting them to a smart object, click the top layer then shift-click the bottom layer, this should highlight all the layers. Then right click 'Convert to smart object'.

The next step is to go to the top and click filters, you will find it on the very top, alongside file and edit. Then proceed to Magic Bullet < Looks.

Next, you will need to apply each of the tools, to do this go to the right where it says 'Tools' and find each one shown in the picture below. For example to find 'POP' you would go to 'Tools' < 'Subject' < 'Pop'. Each tool has a subcategory, which is highlighted in yellow below.

You will need to adjust the settings of each subject, for your convenience I will show you my settings below for each subcategory.

Settings

POP

LightFlex

Curves

Saturation

Colour Reversal

Colour Contrast

Print Bleach Bypass

Chromatic Aberration

Final Product

Pretty alright tutorial. It's a shame that you're gone so soon.
