Thread: [Recieving TCP header information with Qt?](#)

Pinhead Larry - August 31, 2016, 6:56 am

Can you recieve the TCP header information with qt?

Ashlanfox - September 1, 2016, 9:00 am

Why couldn't you? The documentation is quite a direct answer to it:

<http://doc.qt.io/qt-4.8/qtcpsocket.html>

zNinja - September 1, 2016, 9:06 pm

Op probably ask for tcp header information of packet.

Not sure for qt, it is high level framework.

Probably you can do with some third party like libpcap.

Edit: I mention libpcap since I understand you searching from cross platform way.

But you can do that with platform specific code also.

Yeah this is what I was looking for, thanks for clarrifying. I was hoping I could stick to Qt, never really looked into lipcap, but after doing some research it can do what i need.
