Thread: [Good Graphics Card Compatable with PC?](#)

Redundant - September 1, 2016, 6:27 am

I bought this computer for \$200 refurbished, It's a Lenovo ThinkCentre M58P, I wasn't looking for raw power I just wanted to Casually game Counter Strike/RS. The graphics card is utter trash and can barely run Runescape at 50FPS and I want to play CS:GO as well.

I am also having a hard time finding where I could find gfx cards that are compatible with my PC before I go start buying them to find out they won't work.

Specs:

[img]<http://image.prntscr.com/image/4c392c936aab44018f3bd3696fd5fd8c.png>[/img]

Price range: ~\$200

You Just Got Sarged - September 1, 2016, 7:22 am

I would return it that is way to much for that computer. This one below has a CPU that is about the same as an intel i7.

<http://www.ebay.com/itm/Dell-Precision-Workstation-T3500-Xeon-W3565-3-20GHz-12GB-1TB-HDD-2X500GB-/162178534977?hash=item25c2980e41:g:gpkAAOSwgZ1XvJvw>

If you can't get that I notice you have some kind of prebuilt. Please let us know the model of the prebuilt.
