Thread: [Linux Command Line Tutorial #1 - What is Linux?](#)

Cyber Warrior - September 2, 2016, 1:05 am

Linux Command Line Tutorial #1 Content:

:# What is GNU/Linux?
:# How was Linux created?
:# Who owns Linux?
:# Who uses Linux?
:# What is the difference between Unix and Linux?
:# How does Linux differ from other operating systems?
:# What is a distribution?

[Video: <https://www.youtube.com/watch?v=W5ADSqvbJHI>]

I will be making video tutorials for Linux OS. First I will write the basic stuffs, all beginners should know and step by step you'll learn everything you need to know to work on Linux with little effort. You'll learn how to automatize your daily work on linux with shell scripts.

With detailed instruction and abundant examples, my tutorials will teach you how to bypass the graphical interface and communicate directly with your computer, saving time and expanding capability.

Beginning with command line fundamentals, my tutorials moves into shell scripting and shows you the practical application of commands in automating frequently performed functions.

The Linux command line allows you to type specific shell commands directly into the system to manipulate files and query system resources. Command line statements can be combined into short programs called shell scripts, a practice increasing in popularity due to its usefulness in automation.

Great videos and tutorials.

I am glad to see someone else in this section making worthy contributions. :)
