WorldClassic - September 2, 2016, 6:36 pm

I can do it for 0.1 BTC . PM me

?????? - September 2, 2016, 6:50 pm

0.1 BTC is about \$57 USD

Just buy a crypter.

You'll get more crypts out of it, then a single crypt, you'll get as many as you want, within your license duration.

I suggest using the Search function, and looking up EXE Protector. That's a good one.

Or, you could try Alpha Crypter, Cyber Seal, or Data Protector in the cryptography section.

He could still have his own and not have to rely or wait on anyone. Nothing worse then when you want something done but have to wait for someone else.

Agreed. I 100% Agree.

Not to mention whoever you ask to crypt for you can simply give you his server instead of yours lol. Or bind his to yours. Etc.

Not worth the hassle. Either pay for one yourself that you will have access to whenever you want – or download a source code and modify it however you want.

TrinityUK - *September 3, 2016, 11:40 am*

theres a website called fud.io that crypts your files online for you instantly.

its about \$30 a crypt i think or more if you go for the private stub option, But it will likely be FUD and it is instant.
