Thread: [Looking for VB6 & VB.NET Crypter sources](#)

Methadon - September 8, 2016, 8:27 am

Dear Members,

I'm looking for some decent Crypter source codes. They have to be in VB6 or VB.NET. It seems that all those mega packs have broken download links, so most of them can't be downloaded.

Hopefully some of you guys are willing to share some good source codes!

Slavoj Žižek - September 8, 2016, 9:15 am

This boi's downloads still work

<https://hackforums.net/showthread.php?tid=4450461>

have fun skidding, don't fucking copy any paste. Learn

Methadon - September 8, 2016, 10:17 am

Thank you alot for helping me! I'm also looking for those undetecting tools like Source Undetector, RunPE generators etc...

I just like to play with these tools. Someone got a collection of them? All those old but handy tools are hard to find these days.

Zilog80 - September 8, 2016, 11:26 am

VB6 [put_anything_here] source codes? Really?

Next step: Looking for [Logo](#) FUD crypter.

Spoiler ([Click to View](#))

Why not? ?

Methadon - September 8, 2016, 1:15 pm

What are you saying Zilog80? I was a very active and respected member here on HF's a couple years ago. Unfortunatly I can't remember the details of that account.

If you think that I am trying to make an old Crypter source code FUD, by using old and out-dated tools then you are wrong. It's just to play around with and to see what those old Tools are capable of against nowadays AV's.

against nowadays AV's.

Oh C'mon boy. I think I have not disrespected anyone.

I was just saying that studying VB6 sources in 'present day' to see how this tools were capable against AV's 5-10 years ago is a waste of time. A lot new features have been implemented in AV's. So this "old techniques" are pretty useless nowadays.

But hey...a word is enough to the wise...you know

Methadon - *September 8, 2016, 3:05 pm*

@Zilog80:

I'm sorry that I misunderstood you. You didn't disrespect anyone, I just misunderstood you. I'm sorry for that.

I am aware of the fact that AV's have developed new methods and features to detect malicious software. Encrypting strings and using Dynamic API-calls isn't going to do the job anymore, like it was doing a couple years ago.

I just like to play around with old source codes and tools. I was not planning on using old pieces of code to try making a Crypter. Although I'm wondering which methods are used nowadays to get rid of detections, cause I haven't been active in coding in vb.net for a couple of years. So there are alot of new things to learn from.

zarlo5899 - *September 28, 2016, 4:15 am*

why would need to use vb6
