Thread: [\[TUTORIAL\] Bypass the download time limit of any file hosting website](#)

protld - September 9, 2016, 10:34 am

Hello,

This is my first tutorial on HackForums.net and it's really simple.

I'll be showing you 'How to bypass the download time limit of any file hosting website.'

I had a story ... While I was downloading a file from NitroFlare.com, I closed Internet Download Manager wrongly ... and when I opened it again and tried to resume it failed to resume , BUT it showed to go to the website and download again and the download will complete ! but sadly I got 175 minutes time limit to download any file for the second time ...

so I bypassed that by doing the following:

1. Use Google Chrome
2. Open Google Chrome and search google for " hotspot shield google chrome "
3. Install the Hotspot Shield Google Chrome Extension.
4. Use it on the file hosting and enjoy downloading with no time limit!

The country I used on Hotspot Shield was United States.

Cons:

* You can't download with Internet Download Manager even if the IDM integration is configured correctly for Google Chrome.

Hope it helped as it did for me!

Have a great day.

Best regards,
protld
