Thread: [\[PRIVATE CRYPT\] Crypts With My Private Crypter \[PRIVATE CRYPT\]](#)

Demoralise - September 12, 2016, 4:16 am

I am providing private crypts for people with my own crypter. Each crypt will cost \$10 USD but will be guaranteed to be FUD on pscan.xyz.

Only Bitcoin will be accepted.

For a limited time I will sell copies of the source code for \$80 USD.

Features:

- Encryption Key
- Binder
- Change assembly
- Icon changer
- Process elevation
- Persistence
- File pumper

Supports the melt feature in most RAT's - therefore you can melt your file by enabling this in your RAT. I did not code it into the crypter in order to prevent issues with the FUD rate.

Sleek - September 12, 2016, 5:16 am

Provide features/options yadayadah (common sense)

Supports the melt feature in most RAT's - therefore you can melt your file by enabling this in your RAT. I did not code it into the crypter in order to prevent issues with the FUD rate.

Feature: Encryption key | Nice best feature ever seen! ?

Tell us what it is coded in and it does not prevent issues with FUD rate if you add melt or not.

Dark.Shadow - *September 26, 2016, 8:33 am*

What is the fud time? and does it bypass runtime?

QU?CKSILVER - *September 26, 2016, 4:50 pm*

What about process elevation thingy? UAC Bypass?

DopplerAF - *September 27, 2016, 6:37 am*

Omfg you are telling to select "melt" option in the RAT kids these day inviting runtime detections.

Nice c&p source code though.

Ov3rFI0w_ - *September 27, 2016, 7:00 am*

Thread title got me goosebumps.

yotoprules - *September 27, 2016, 7:51 am*

I think this would be better if you lower the price a little bit, I mean you can get your own crypter for like \$12 per month that works well

Kabir - *September 27, 2016, 9:14 pm*

make it \$3 n then wrooo blah blah blah whatsoever u give runtime mOL
