Look I think youre new to the hosting business. But here is the bigger picture in easy steps.

You found the datacenter/provider/upstreamers

They announce my IPs through their ASN. I also have my own ASN

Link to prove : <https://whois.arin.net/rest/org/HC-814.html>

Anyways good job finding the information of everything :)

Let me know via MSG if you want to talk more. :P

Amazing support and great service.

You got yourself a new customer (:

Knowledgeable - October 13, 2016, 2:02 am

Hi,

I have simple needs but am trying to stay at a low price if it's possible

I need an RDP that

-Has good port speed

-Has at least 100GB storage

-I can run a simple bot, youtube monster, with multiple instances.

I'm currently on a 1GB RAM rdp and i can run 3 instances but i would like to have something better.

I would also like to be able to download and seed torrents.

Can you assist me?

Damn, never seen servers this cheap when I get some extra money will be sure to buy :)

HostSlayer - October 13, 2016, 3:13 am

@AfterHours

Well for this I would be recommending the SHARED HOSTING plan as everything is already integrated. All you would have to do is upload the page and payment method via the website.

If you want add my skype (VictorVEncis) and I can explain better and get to know what you want to do.

@Gummy Bear

Yeah! We do have one of the cheapest rates here in HF and we been in business since 2011 :)

Yes, on the Ubuntu you may install an RDP and take control of the VPS as if it were almost a windows server.

You have to type in your own password when signing up, having a reset password link in the login form with hashed password just makes everything way more secure.

Hello how can I get a good server to start hosting my scampages so my links won't die fast ? Or I can repair my links once it's reported since I can build links from the server...

Please share more cos a friend of mine said I should get a server to host my office365 scampage instead of buying cpanels that the link will die in a day or two but if I get a server I can build links and know when it's reported and make it good again is that true ???
