Thread: [How to Set Rectangle location properties? \(Old Way\)](#)

4h35i13n46u7 - September 18, 2016, 4:51 am

Oh yes, I saw this =

[https://msdn.microsoft.com/en-us/library/system.drawing.rectangle\(v=vs.110\).aspx](https://msdn.microsoft.com/en-us/library/system.drawing.rectangle(v=vs.110).aspx)

Dim recta As New Rectangle

'It says these properties are Read-only.

recta.Left =

recta.Bottom =

recta.Right =

recta.Top =

And my problem is, I want to use these properties to set values :-/

Because i have values in this format. Many!

And so i guess, i am in a problem. ^_^

I saw the example..

Dim blackPen As New Pen(Color.FromArgb(255, 0, 0, 0), 5)

e.Graphics.DrawRectangle(blackPen, 10, 10, 100, 50)

How do i..

e.Graphics.DrawRectangle(left-x, bottom-y, right-x, top-y)

Instead of..

e.Graphics.DrawRectangle(blackPen, 10, 10, 100, 50)

?

OR

Is there anyway to convert locations?

E.G

1) 2694 to 9 'A Y co-ordinate

2) 2706 to 12 'A height

?

Because i want only the 'Y' and 'Height' converted.

[\[img\]http://s16.postimg.org/6a1tt037p/help.jpg\[/img\]](http://s16.postimg.org/6a1tt037p/help.jpg)

Please Help! Please. Please.

Thankyou.

Hmmm...I don't understand your question.

Rectangle can be defined as:

PHP Code

```
<?php
```

```
Dim myRect As Rectangle = New Rectangle(some constructors here. Use your best choice)
```

Why do you need to set the properties instead of via the constructor?

And what are you doing with Tesseract? You can just make tessdata and use that.
