Thread: [Gun Aimbot that makes projectile\(snowballs\) go directly to enemy players.](#)

BeastyBoo - September 18, 2016, 11:47 pm

Hey, I was wondering if there was a way to make an efficient and clean aimbot for a gun server where different items shoot snowballs. Which means making the snowballs go directly to the enemy target.

I dont know how to make this efficient and good. I've tried something but it didnt work out the way I planned.

Please help.

You could start by telling us what the heck you're talking about.

What is a "gun server"? What kind of snowballs? And what does all this have to do with Java?

lol.

You would have to reverse the plugin the server is using (or resource packs? no fucking clue how MC works) to understand the projectiles. Then you would need to write an aimbot the also takes into account the math required to shoot a projectile at an entity. This in itself is not too difficult.

No, sir, it is not. HackForums is basically an all-purpose forum and this subforum is about the Java programming language.

Although Minecraft is mainly written in Java you can't assume that we instantly know what you're talking about.

I think you misunderstand the term "hacking". It's not about cheating in games.

I think you misunderstand the term "hacking". It's not about cheating in games. Yeah sorry, I didn't realise before I started going thru the main stuff on this page. It's some cool stuff here though. Anyways, if there is any minecraft hackers who would like to help me, either thru saros or any other kind that's possible that would be lovely.

What am I really trying to do:

There is a minecraft server where different tools like a wooden_axe and diamond_pickaxe shoot snowballs. These snowballs give damage to the players when they get hit from them. So the snowballs are pretty much bullets.

However, I'm trying to find a way to make an aimbot out of it. Where when you are holding the gun, your head flicks to the closest player within 100 or 200 blocks, so I don't have to aim. There are a few challenges like when the players are running on a long distance you will need to shoot maybe 2-4 blocks in front of them, and when they are running on close range it would be best to aim 1 block in front.

So if it was a way to make the snowballs go directly to the closest player that would make it a lot more easier and a lot less math.

Please help me. My Saros is : beastyboo@saros-con.imp.fu-berlin.de
