Thread: [Hold 'n Hide | Premium Bot Holder | BEST/CHEAPEST ON HF | AutoBuy](#)

Cokeboy - September 19, 2016, 9:52 am

FEEL FREE TO CONTACT ME VIA PM IF YOU HAVE ANY QUESTIONS

m4dh4ck3r - September 19, 2016, 10:18 am

Is it 7\$ or 70\$ or 700\$? :\

Is the price just for bin or bin+builder ?

Any screenshots of the panel ?

Cokeboy - September 19, 2016, 10:25 am

Pmed you still up for sale

Moon Rock - September 21, 2016, 11:51 pm

Video will be released soon!

Cokeboy - September 22, 2016, 11:56 am

pm me for support for my skype

Cokeboy - September 23, 2016, 2:59 pm

pm me for support for my skype

Killer992 - September 23, 2016, 3:49 pm

Any screenshots showing how many it can hold and still remain stable?

Cokeboy - September 23, 2016, 6:09 pm

got screenshots in pm so pm me if you want it

Cokeboy - September 24, 2016, 6:29 pm

Still selling cheapest on hf by far

Cokeboy - September 25, 2016, 7:12 pm

Update went out today. Cheapest and best api on market.

Autist - September 26, 2016, 3:44 pm

Can you send me a PM of screen shot?

Cokeboy - September 26, 2016, 5:58 pm

How is this program an API? Do you even know what an API is?

I feel like this would be a bad product to hold your bots on, however I can only speak from what I personally see. I have not used this program or do I know the coder.

However, coding something like this is quite simple. I feel as if the coder wanted to code a botnet, but isn't experienced enough to do so. He has priced his product low, meaning he is saying it's only worth the price he puts on it... \$7.

This software really has no features that are unique to a bot hoarding software so far that I have seen. Registry startup... Meh, one or two lines of code.

The coder has also included messaging and text2speech. If this program was built for a bot hoarding software, why would these be included? What use do these have? Considering the coder said "why have loads of features... that will cause problems down the road" - seems counter intuitive.

@OP - Be proud of your work. Release it for free or even open source. I just don't really see what makes your product special and worth someone paying money for. If it had extreme persistence, and perhaps even a private rootkit (if you're willing to go that far and get that experienced), I can definitely see this product returning to the market as a useful software. GLWS.

You clearly dont know how to use this then. Other people can vouch for this as well as we had have over 10 sales this week.

Holy fucking shit! 10 sales!

I clearly do know how to use this. And you clearly don't know how to accept the truth.

Possibly I am completely missing the whole purpose of the application, however I doubt it. I have much experience with this sort of software, and have even coded my own one of these.

If you could explain to me how I don't understand how to "use this", thanks. But I can almost guarantee you I know exactly how your software works.

Sure, it holds bots. I am sure people can vouch for that. The program does what it says it does... holds bots. But it really offers no other persistence features besides that. And if it does, you haven't listed them... which wouldn't make sense.

AAA+ - September 27, 2016, 7:24 am

Is it persitence? how many can it hold?fud? screenshots?

Theres called updates. Like i said doubt you could come close to even making this and if you even have. You could never make it as stable and fully function like this. Cheap for being that its easy for people to afford. No point in trying to talk shit bc you havent used it or even seen your "coded" .

(Sep 27, 2016 07:24 AM)AAA+ Wrote: [\[CITE\]](#) Is it persitence? how many can it hold?fud? screenshots?

You refuse to provide any screenshots in public or information regarding the persistence. I'm guessing you don't have any persistence even coded into it. I already can code something better than this.

Also, just wondering, which language is this coded in? Very important piece of information you just decided to leave out of your thread? Inb4 .NET

So code it and lets see until then I could care less because all I see is just a keyboard warrior. you only product is a file transfer which sucks too lmao.

?Fetz? - September 27, 2016, 12:52 pm

Sorry, but my "file transfer" isn't a product. It's a free service I offer to the community.

And for the record, it's the only site available on the forums that provides what I provide. I have many many people who appreciate my work for the community, which I provide to them for free. And not only that, I pay for the hosting SO that users on HF can use it. I currently only make \$0.26 a week via. advertising on the site.

Thanks to me, members now have a place to upload their "Hold 'n Hide" .exe's to, so they can execute them on bots!

Your argument is flawed... once again.

Regardless, I am not the one coding a product and selling it. You are. So it really doesn't matter how well I can code your product.

Edit: Screenshots of the program:

Spoiler ([Click to View](#))

Program appears to be coded in a .NET language. Which makes zero sense for a "stable bot holder"

If you actually designed the program to hold bots the most efficient and stable way possible, you wouldn't be using .NET. Just my 2 cents.

Ew wtf it looks horrible, I almost bought this, and loaders are mentioned to be http based.

And this looks just like a returned version of a rat with out theits core functionality, btw I love your file sharing website I stopped using long because of it
