Thread: [Bypass MSIL detection Antivirus](#)

Teeknofil - September 21, 2016, 3:13 pm

Hi,
I coded in C # personal crypter to a score of 5/35 ? . How bypass MSIL detection ?
What's this MSIL detection ? ?
Thank you.
Excuse me for bad english, i am belguim.

Wrong section my belgium friend ?

You are in VB;NET , you need to post in C#.

?

?

you need to post in [cryptography](#) section or any other lq section. the .net section is not your private crypter playground

Teeknofil - September 21, 2016, 6:21 pm

ok, excuse me.
good bye.

Netw?rk - September 22, 2016, 12:08 am

So, YOU coded a crypter with a 5 detection rate but you don't know what is an MSIL detection?
Legit.

Legit.

I am newbie on coding of crypter but don't in programming C#. On Google i have found MSIL that meant Microsoft Intermediate Language but i do not know resolve the problem. Do you have documentation ?

I am by far a pro at crypters and how they work but with some searching i found out that changing your Runpe call can "solve" this issue.

?

My function is called with a static method. I need to create a new object?

Dem?n - September 22, 2016, 4:18 pm

MSIL is a type of file format.... which means the determination is generic. Just keep changing up code until it isn't detected anymore.

Teeknofil - September 22, 2016, 4:19 pm

I have deleted the option Junck code, Compress Gzip and Preserve EOF Date. I have 2/35. You an other idea ?

tweety - September 22, 2016, 4:43 pm

put a fork in it, i think it might help

If jay what you have managed to pick up out of the scans that is good, you now know what is causing the issue, what you want to do from here is look over the code and get an idea what would be causing it in the code of that. You'll have to make some changes to the code to use different methods that won't be detected as a virus instead of the ones you are currently using. Also have you added assembly and icon to the program? Also remember to use a confuser to cover the code. That can sometimes help but is also good to help with people stealing code.

Hope that helps alittle
