Thread: [Facebook ClickJacking \(good technique to find who's doxing you\)](#)

Mr. Robot - September 22, 2016, 3:15 am

Use it for free likes from your page visitors. Don't use against HF users please.

You can implement it into your site, and you can also add it into a tumblr page if you know what you are doing. This allows you to make a new facebook page/website and have it hidden. You may post it in a dox somewhere and when the person trying to dox you accesses your tumblr/website/other - you will get a like on your facebook page letting you know their current logged in profile.

Made a demo site for you guys.

I have set the opacity to 10 so yall will see how it works.

Site is setup so you will have to click on the page somewhere when your mouse changes to avoid any abuse towards HF members.

Post below if it doesn't work

(site was being abused, so removed it)

It will like

<https://www.facebook.com/Supernatural/>

Spoiler [\(Click to View\)](#)

Should be able to edit the variables and add it into your website with the following.

Motusora - September 22, 2016, 5:45 am

im going to try this in the future .. bookmarked ?

Troja?Hors? - September 22, 2016, 5:47 am

Another HQ thread from you! This will be useful, thanks.

Mr. Robot - September 22, 2016, 6:05 am

(Sep 22, 2016 05:45 AM)Rodrigo Duterte Wrote: [\[CITE\]](#) im going to try this in the future .. bookmarked ?

Sounds good mate. They patched it pretty fast last time.

(Sep 22, 2016 05:47 AM)Troja?Hors? Wrote: [\[CITE\]](#) Another HQ thread from you! This will be useful, thanks.

Thanks man, hope someone finds it useful.

seedhabandha - September 22, 2016, 6:28 am

Thanx for sharing with us.

Mr. Robot - September 22, 2016, 11:57 pm

People not like this or just no use?

skelly76 - September 23, 2016, 12:53 am

(Sep 22, 2016 11:57 PM)Mr. Robot Wrote: [\[CITE\]](#) People not like this or just no use?
It's very useful, I just think a lot of beginners see all that code and get scared lol.

One hell of a tool if people don't log out of their FB accounts and yes I didn't see it. :P

quackyboy - September 23, 2016, 1:11 am

(Sep 22, 2016 11:57 PM)Mr. Robot Wrote: [\[CITE\]](#) People not like this or just no use?
It's a good guide I just need to learn how to put it into Facebook I'm a noob

Craze Products - September 23, 2016, 1:18 am

Didn't work for me bro, not sure why.

quackyboy - September 23, 2016, 1:25 am

(Sep 23, 2016 01:18 AM)Craze Products Wrote: [\[CITE\]](#) Didn't work for me bro, not sure why.
From what I've read on here you have to have the Facebook page open you put the code into

Bulgarian - September 23, 2016, 1:28 am

Thank you so much OP, now I know how all these weird pages end up on my timeline and say that I like them when I've never seen them...

Thank you once again, you are Awesome!

Mr. Robot - September 23, 2016, 2:25 am

(Sep 23, 2016 01:11 AM)??n?u??e? Wrote: [\[CITE\]](#) It's a good guide I just need to learn how to put it into Facebook I'm a noob

Read the first part of the actual code, change Hackforums to your facebook page URL.

(Sep 23, 2016 01:18 AM)Craze Products Wrote: [\[CITE\]](#) Didn't work for me bro, not sure why.
Were you logged into facebook when clicked on my website ? You have to click somewhere on the page because I didn't want to iframe it and trick anyone by accident.

(Sep 23, 2016 01:25 AM)??n?u??e? Wrote: [\[CITE\]](#) From what I've read on here you have to have the Facebook page open you put the code into
No.

Craze Products - September 23, 2016, 2:26 am

Yeah I was logged onto facebook.

Mr. Robot - September 23, 2016, 2:30 am

(Sep 23, 2016 02:26 AM)Craze Products Wrote: [\[CITE\]](#) Yeah I was logged onto facebook.
So you went to my site I listed as a demo, then clicked somewhere by the text?

I set the site up so you have to see your mouse change, you can change that in the code

quackyboy - September 23, 2016, 7:23 am

Yeah I can't work this out lol - I'm just bad at this type of stuff

skity - September 23, 2016, 10:40 am

Didn't work here, there was no like from me on supernatural page.

FractumSeraph - September 23, 2016, 12:35 pm

AdblockPlus, Banner blockers, and antivirus will block this though. Still nice.

kpown - September 23, 2016, 12:42 pm

WOW this is actually a really neat technique :)

Bulgarian - September 23, 2016, 2:24 pm

(Sep 23, 2016 12:35 PM)Fallen Archangel Wrote: [\[CITE\]](#) AdblockPlus, Banner blockers, and antivirus will block this though. Still nice.

I never take ABP off and it worked.

The code is really simple and OP even made comments which make it extremely easy to understand. I don't know JQuery and it mostly makes sense to me.

FractumSeraph - September 23, 2016, 5:00 pm

I think it's because I ticked the option for malware blocking, tracking blocking, and social media button blocking.

And even when I disable ABP, my Kaspersky extension blocks it.

ABP and Kaspersky on [\(Click to View\)](#)

Both off [\(Click to View\)](#)

Allay0x3 - September 23, 2016, 7:10 pm

Very useful will try that thank you

Adblock doesn't block it for me, but thanks for the post mate.

walt3r - September 24, 2016, 6:48 am

Thanks bro , signed as bookmarked xd

walkedvirus - September 25, 2016, 2:02 am

oh well... am new here.. and those codes really sounds scary to me

quackyboy - September 25, 2016, 6:19 am

(Sep 25, 2016 02:02 AM)walkedvirus Wrote: [\[CITE\]](#) oh well... am new here.. and those codes really sounds scary to me

I've been on here for a little while and I still suck at this so better now then later I guess

MythosHF - September 25, 2016, 8:46 am

Worked pretty solid for me, m8.

the0N0 - September 25, 2016, 9:42 am

Once again something useful from you. GJ OP ?

05317832892 - September 25, 2016, 9:47 am

So if i set the opacity to 0 its basically incognito. I can see lots of ways this can be abused. A fake front page with this and then a direct download?. Maybe when something nice and juicy comes up like a java drive by or chrome download and run exploit I could abuse this a lot.

ShawnHF - September 25, 2016, 9:48 am

Bookmarked. Thank you for this awesome tutorial.

moorbes - September 25, 2016, 2:50 pm

I also would advice people using it for social networks like, facebook, use obfuscation for the code.

Mr. Robot - October 11, 2016, 4:03 am

To add this to your site, just add in this script to your sites page.

Then save the other script as clickJack.js and upload to the root directory.

Riggs - October 11, 2016, 4:08 am

Been a while since I've seen an innovative method on HF that's impressed me. Simple, yet effective. Nice work.

Daniel Day-Lewis - October 11, 2016, 4:33 am

Yo good shit dude, that's actually ridiculously helpful. I dont have a personal facebook account but I bet other people who dox do and they would get caught doing this eventually.

Mr. Robot - October 11, 2016, 4:35 am

What you do is make a fake skype, drop it around and then on the skype post a website with free hosting with the click jack :) That way when someone's trying to go ham, they get IPlogged from your site and you get notified on facebook, even if they realize and go unlike the page.

SIM-2059193 - October 11, 2016, 4:36 am

Thanks for the beginner scripts here

iDemiurge - October 11, 2016, 4:38 am

Cool tool man!! Way to go the extra mile and give a demo! HQ post

Daniel Day-Lewis - October 11, 2016, 4:41 am

good shit dude, tbh this is the first innovative thing ive seen regarding doxing/pi work on here everything else is just old shit we have been using for a while now. This is going to be the first new method im using in quite some time now. thank you.

I usually post fake doxes around and set up some dummy sites that if people somehow find, I know for sure are trying to dox me. Hopefully they aren't on tor because they are trying to be speedy about things and I am able to use scripts from my other site to grab information from them

<http://browserknowledge.co.nf/>

Very handy because most people don't bother trying to hide themselves while doxing until they have to log into an account.

not going to lie I used to not hide for shit but ~2 years ago is when i started using rdp/socks5/vpn In my opinion its the best route for me because its faster than tor and technically im not even using my own machine and with the fake doxes i have about 20 fake doxes for my DW aliases posted everywhere

FrganiLY - October 11, 2016, 11:38 am

Thanks for the share, I'll try this out ?
