Thread: [Removing index.php](#)

Kill Joy - September 23, 2016, 10:51 am

I've been having a hard time trying to remove index.php from the forum. I've tried a few different codes.

Here's one:

```
Code RewriteCond %{IS_SUBREQ} false
RewriteRule ^index.php$ http://www.example.org [R=301,L]
Anything I'm doing wrong? How do I check if mod_rewrite is enabled?
```

Netflix and Weed - September 23, 2016, 9:22 pm

Try this code out and see if it works.

```
Code RewriteEngine On
RewriteCond %{REQUEST_FILENAME} !-f
RewriteRule ^([\.\.]+)$ $1.php [NC,L]
RewriteRule ^([\.\.]+)$ $1.html [NC,L]
After doing this you can go to the link it it will remove the extensions ".html" and ".php" from the url.
```

Why use rewrite rule? Just edit the header template and make the logo redirect to

```
Code {$mybb->settings['bburl']}
Instead of
```

```
Code {$mybb->settings['bburl']}/index.php
```

Code {$mybb->settings['bburl']}
Instead of
```

```
Code {$mybb->settings['bburl']}/index.php
because he is probably wanting to change the url in the navigation box of your browser, not in the
code of the forum.
```

Exactly. Thank you.
