Thread: [Create a link which runs an exe when you click it?](#)

LastSession - September 27, 2016, 6:49 am

Is that possible? I don't mean Java Drive By or so. It can be obvious that one opens an exe when he clicks the link (<http://xxx/virus.exe>)

Any ideas?

Spoiler ([Click to View](#)) There are ways to do it, Java Drive By is outdated but there are new ways.

Impossible, if this did exist it would be chaos because you could redirect it from a lookalike link eg g00g1e.con -> virus.exe link

Direct downloads are the best your going to get, you can't force the person to execute the exe.

Stashy - September 27, 2016, 7:57 am

you can't run an exe until it's downloaded lol

and even if it was downloaded, like the dude above said, you can't make them run it

Direct downloads are the best your going to get, you can't force the person to execute the exe.They call them selfs hacker ...lol? rule of hacking always think out of box..

Aim for impossible

Brother you can use armitage there a exploit called hta try that
