Thread: [Http Injector Free Surfing with no mobile data](#)

Howard Black - September 27, 2016, 10:39 am

Can someone point me to the right direction to what I think is about VPN's, Payload, Remote Proxy, SSH, and able to surf the internet/youtube/download (No Torrenting) using your cellular carrier network?

APK is Http Injector by Evozi

I already know how to use it but the problem is I do not know how to look for "free sites"(payload) where I can open a website without needing to have load on mobile data.

Payload is needed for it to work... But I can't seem to find out how to find those payloads..... ex. [tntinstagrab.com](#) OR [marketplace.smartads.com.ph](#) OR [helm.tekmob.com](#) OR those opera-mini servers that were caught and taken down by the carrier network and now won't work.

Uhm requirements is a mobile wifi/smartphone, prepaid SIM card with the specified carrier network you want to use the internet on, http injector app.

Obviously I have no idea where to start
Tried Reverse IP...
Tried Tracert...

I wish I can post pictures but I need 50 posts !!

This is the App
[ht_p://img_r.com/wcAWhDC](#)

This is the payload or URL/Host or Free Website. This is what I want to know. How did they know about these sites?
[ht_p://img_r.com/MpkCZp4](#)

Finished payload config
[ht_p://img_r.com/A4VUngE](#)

Connected, you can now browse/stream/youtube/download even if no load on pre-paid SIM card
