Thread: [Combine my keylogger with a program?](#)

MrZymith - September 27, 2016, 8:24 pm

Anyone know how, if possible, that i could combine two programs so that the main program would run normally but also the second would run, which in this case be the keylogger? So if someone were to run it and play that game or use that program the keylogger would also run without interrupting th eprimary program? Idk, if that makes sense but maybe someone can elaborate on how to do so.
