Thread: [About bitcoin mining with a rat](#)

odedor444 - September 28, 2016, 11:46 am

Is it still possible nowadays?

I new to this thing and just like everyone,

Money makes me curious.

I read a lot about this but I need personal opinion.

Have a few questions :

Should I waste my time on learning this or is there another easy way to make money from ratting?

What miner should I use?

Pls share personal profit (just for letting me know if it is really profitable)

Thanks in advance.

There are easier ways for sure, btc mining isn't as effective as it used to be

FractumSeraph - September 28, 2016, 11:53 am

It's a waste of time. For it to be worth it anymore you need thousands of dollars worth of hardware.

A GTX 1070FE will get you about \$1.50ETH in one day. However, anyone with a card that high end is going to notice that something up when it's running at max 24/7.

Can u share what are the easier ways?

You can pm me if u don't want to post here.

KappaSpam - September 28, 2016, 12:04 pm

Yeah btc mining isnt worth it mate.

Not really worth it in my experience. I tried this a few years ago, probably made 0.8 BTC total, and this was over a very extended period of time.

I saw a suggestion somewhere else on here earlier. Think of other ways to get Bitcoins if that is what you're after. You can do work for people and have them pay you in Bitcoins, or sell something (maybe video game items?) and be paid in Bitcoins.

The Sandwich Protector - September 29, 2016, 5:56 am

if you want to mine you should have a couple hundred slaves

Armada - September 29, 2016, 6:05 am

Buy a mining rig and go for ether or some lesser coin.

RATS and crypto mining is useless tbh.

This is probably the best advice you are going to get OP.

mining with the clients on your RAT will not be worth it, not Bitcoin, not any other cryptocoin. (unless you've got thousands of clients maybe, but still not worth the trouble).

A mining rig is your best way to go.

SIM-2580909 - September 29, 2016, 5:25 pm

even if you did have a massive database of clients, for eg 5k. It wouldnt be worth it as half of your clients wouldnt have good internet or good equipment.

XMR Miner - September 30, 2016, 5:57 am

Bitcoin mining with common hardware is always a bad idea. But there are still some coins you can profit from. Right now a great option is Monero, no asic mining currently exists and gpu mining offers very little advantage over cpu mining, making it an ok option to mass mine with common cpus.

Devsx - September 30, 2016, 8:05 am

Diy asic mining is still an option - and Monero seems the best premade bet
