Thread: [Youtube Bot's and Proxy Grabber Tester Source Codes](#)

Noob3 - October 3, 2016, 1:34 pm

Hi

I am looking for YouTube Bot's and Proxy Grabber Tester Source Codes.

Pm me if you have anything to give away ;)

I would be very grateful Thanks.[/i][b]

jolovic - October 3, 2016, 1:35 pm

Your first post and you are already looking for something free.Awesome.

SIM-1847363 - October 3, 2016, 1:56 pm

This is why we need a mod, theses shit threads are starting to get annoying. Google is your friend.

Ninja - October 4, 2016, 7:10 am

Yes Im going to need a million dollars if you have any dollars to giveaway please PM me ok thank you come again.

Noob3 - October 4, 2016, 3:20 pm

LOL well if you don't ask you don't get! everything should be free even money lol

SIM-1847363 - October 4, 2016, 3:26 pm

(Oct 4, 2016 03:20 PM)Noob3 Wrote: [\[CITE\]](#) LOL well if you don't ask you don't get! everything should be free even money lolNothing is free, everything requires work and time; Just because you get something for free doesn't mean someone else didn't put in the time or work. That's insulting for people who work hard.

Ninja - October 4, 2016, 5:30 pm

If money was free there would be no need for money thus no money. Its a paradox.

Sure everything should be free. Just wait until put in a lot of effort to buy something, or make something to sell. Ill ask you then if you want everything to be free.

Noob3 - October 5, 2016, 6:10 am

I know! I am just getting a rise out of you lol its so easy to go off subject because of the haters on the net, So much trolling and so little time ;) You gays gave me an idea to make a hack forum and every time some one asks a question or for help or examples and even source codes, i could make an auto response bot that just says "Google It Google is your Friend" wouldn't that be great!

Anyway we are off subject as normal but remember I am such a Noob so I wanted to get some good examples/source codes to show me the best/up to date ways to create YouTube viewer bots and proxy grabbing/teser tools http socks4 and socks5.

I would do it for free for you guys no worries but I want to learn it first so or course that's why I asked a simple question.

Thanks for your interest ;) I will have a look around this forum see what there is.

Have a Uber L33T Day!

It is people like you who think they are special. Lets say you put a lot of time and a lot of effort into making a bot, you think you would give it to someone who just asks nicely? This thread was your first post. You have nothing contributed to the forums. You made an account literally to demand stuff. No one feels like helping you. At least ask more nice and start yourself. You have done literally 0 work on the bot/scraper yourself.

(Oct 5, 2016 06:10 AM)Noob3 Wrote: [\[CITE\]](#) i could make an auto response bot that just says "Google It Google is your Friend" wouldn't that be great!
No you cant make that because you cant even make a proxy grabber.

Anyways, we only say that if we googled it ourselves and easily found a result. If a result is on the second or third page we usually link it. If it is on the first page or even the first result we post "Google it".

For example, in this forums now there is a thread of a guy who wants help to download a webpage. His title is literally "Retrieve website info". If I put that EXACT title in Google followed by "VB.net" I already see the solution without scrolling.

Thing is, this forum is spammed with useless threads that can be solved with a simple Google search. I have been studying this phenomenon for years, but I never found out why people prefer posting a thread over a 2 second Google search.

(Oct 5, 2016 06:10 AM)Noob3 Wrote: [\[CITE\]](#) Anyway we are off subject as normal but remember I am such a Noob so I wanted to get some good examples/source codes to show me the best/up to date ways to create YouTube viewer bots and proxy grabbing/teser tools http socks4 and socks5. How about you start with the part of the bot that you CAN make and then when you run into trouble post the issue here. Dont just ask for sources. If you have a problem and need a bit of help, sure we will help. But dont come in here and demand we give you sources. We, the other members, are people too. We are not some automated bot that is obligated to suffice to your every need. Anyways, if you check my threads you will find I made a release to handle socks 5 proxies in C#/VB.net. I have yet to add socks 4 support, but it gives you the idea on how to do it and with the correct RFC you should be able to adapt it for socks 4.

Have a Uber L33T Day!

You are welcome.

And YouTube viewers get posted here like once a month. Most are pure shit, in fact all of them are, but they should give you the idea on how to do it.

Nikola Tesla - October 5, 2016, 8:52 am

First Go & Learn Basic stuff about vb.net or c# then go and check out Webrequests {Post , Get} , Threading etc.

Tips Youtube Views Bot?

- Analyse requests sent while watching video (use fiddler)
- Basically 3 requests are sent i guess (s.youtube.com/playback , /watchtime & /qoe)
- See Parameters changes for each requests

- You need to send this exact request with paramters change each and every time you send request.

This should help you to make youtube view bot and proxy grabber can be found anywhere on hf.

Noob3 - October 6, 2016, 6:30 am

I can agree with a lot of that Ninja thanks for your input also thanks to Nikola for your reply ;)

I have used most bots ever made on forums like this one and blackhatworld and the rest and your right they don't work, they do look like there working at the time but then google comes along and takes away the hits by the next day.

A lot of it is all about tricking google in thinking there real views but that's getting harder to do these days unless theirs an exploit but then they patch that and close you down so its all a waist of time in the end, best just to have a good youtube channel so you don't have to cheat.

They would have to be real ip's not free proxys or even socks4-5.

Botnet youtube viewer would be a great way of doing it lol

I was thinking of ideas on a new type of bot that could swap vpn ips like that proxy chain type software using Browser agents lists and Referrer lists as well, sort of anything to make google thing there real views. Im not smart enough to make a viewer bots like that but I am full of ideas.

Maybe some type of tor network bot that swaps around your connections on the same youtube page, something like that?

Anyway thanks for the info guys ;)

You don't need a VPN for this, but residential IPs would be nice. And you don't need an exploit. If you view a video normally in your browser and it works you can replicate it using webrequests. And yes switching useragents or even randomly generating them would be smart. Same with referrer. And I am not sure if Tor is allowed on YouTube or even works for views, but you could try.

Noob3 - October 8, 2016, 7:37 am

Yeah remember that exploit or what I thought was an exploit bot viewer called Youtube View Booster that gave you 301 hits in like 3 seconds, I played with that for a bit but tubes got on it quick and your views stayed stuck on 301 forever lol You can use VPN's like VPN Gate which is the best free VPN out there to switch around ips for views but not sure how effective that is and I used Tor to get views but you have to just install flash player and enable it for that, all these ways are far to slow to bother with, be good if you could do something with iMacros but don't think you can do a lot with

that, never used payed private proxy's so don't know but I noticed that most of the YouTube viewer bots don't include any browser agents or referrers.

There is a site hitter called Website Viewer 2016 v2.2 (Vip Pro Edition) witch has the right idea and works very well but that's just a simple site viewer bot, but if they incorporated the same methods and used good working socks5/sock4 proxys, it might even work to trick google enough in thinking there real hits??

Browser agents or referrers might make a big difference on a YouTube bot viewer and so far I have never seen that method used on one.

I maybe wrong as I am only guessing here ;)

I was actually wondering if Tor is allowed or not.. and tried it like 2 minutes ago. Ads appear and hence Tor seems to be complaint with YT. I got French ads though i am nowhere near france. YT and Google actually don't give an F about advertisers. The number of views counted by YT is much much lesser as compared to number of views paid for by ads while testing bots. There are large scale case studies on this which OP could use as guidance. OP google it..the mods are correct. Immense amount of data out there on this stuff. YT view bots if randomized, coded well and using Botnet proxies work amazingly well. There are better proxies than botnetted ones but harder to get.. What Ninja wrote is perfect.. Random user agent, even random size of screen, random referrer, random time of view, random time between views, random actions during views. Just make it so damn random it confuses em and exactly emulates human behaviour. Your bot should be a human as far as YT's filters are concerned.

All of this is not gonna work in a scalable way.

Python + Selenium + Residential IPs = win.. Research and you will get what you need.

@Ninja what are your thoughts on this ?

ccg. - November 20, 2016, 9:20 am

sorry for pushing this post but i think it would not be useful if i create a new one for my simple question.

You asked for a YouTube Bot with functions like, subscribe, rate, comment ...

My question is how much worth would be a program like this? And should it be open source or private? I dont want to feed leechers and skids by publishing something awesome like this :D

Considering it is actually reliable, stable, working, and of quality, then you are looking at an easy few hundred.
