If you aren't happy with the proof, don't purchase the book/try to sales trash my thread. The evidence I've given you shows proof of earnings. It's only \$3 as well. You should take a look for yourself and try it instead of trying to find the method (which you won't be able to, for free at least)

You are. I just clearly stated that I don't want people to try and find the method and try and recreate and sell it (because it is a goldmine). Like I say, if you want to actually try and critique the method I've posted you should buy the script first and run it according to what's explained in the book. Then you can post your criticism. Until then, please refrain from sales trashing my thread and putting off potential buyers, because this is tremendous and anyone can make money with it.

You will be able to profit, for sure! This script isnt your typical martingale bs which bankrupts you in 3 rounds. This script was built with the idea of rapes in mind and how to recover from them with no damage to your balance at all.

It isn't a normal script. It isn't martingale and there are a variety of different techniques behind finding the perfect base bet. You should buy the script before making baseless accusations and sales trashing, there are plenty of features in this pack which make it worth your money.

Post the account profile or PM it to those who want it, so many things wrong with thinking that one screenshot of a good run is considered proof that it's working; especially considering it's a gambling method. Either way, good luck with sales and if I see some vouches I'll toss some money to check it out.

I don't want people to find out the method since it's not Martingale. This works and can save you a tremendous amount of money. The last thing I want is for people to somehow find the method and resell it since it's that good.

I recommend having 20k minimum, though anything lower can work, though you will be betting less, therefore the rate of return will be slower.

I decided to test the method for the heck of it, did 50bits as a safety net, had 26k. Not sure if I did it right, as I was just bored and first timer on the website.

I didn't do too well I guess - <https://www.bustabit.com/user/volter315>

Are you stupid? If you look at the history and losses you can see its not martingale.

This system is generally played with an even money game such as the red/black bet in roulette or the pass/don't pass bet in craps and is known as the Martingale. The idea is that by doubling your bet after a loss, you would always win enough to cover all past losses plus one unit.

In what history are you looking because from what i see it doesnt double your bet after loss

Not sales trashing, just placing some facts. Do not make empty promises. Bustabit could go 0.00x 10 times a row leaving you empty handed if it were to happen, people get lucky, and people get unlucky. Telling your customers that they will make profit is of course good marketing but also false advertising.

Well gambling is for fun but never for living :)

I am not sale trashing here but you should mention the risks involved in gambling in your sale

thread , so people know the risk part also . Whatever method people use they will loose all at some point which no one knows when the Constant Rape train coming for them , so it has risk of being loss all of funds and i guess you must mention that in your sale thread beside all good points , May be your script is good and can hold customers a bit long time to earn but in the end house always wins .

Btw Good price mark for the product , :)

Soulmate~?? - November 11, 2016, 12:34 am

Like everyone has already said your profile is public so everyone can pretty much see the script for themselves and be able to use something similar without actually buying it. It does use a martingale strategy (this shouldn't have a negative or positive connotation, martingale just means you are increasing your bet every time you lose) but this one does skip and increase the multiplier after each loss. I know this and I'm pretty sure what mulitplier it increases to because this is a version of a public script that has been tweaked. I've seen it a donzen of times on HF. The only thing different about it is the base bet which is the only thing I'm not sure about, everything else like finding the right multiplier to recover and making a profit in the same game is a public script.

Although it is mostly public if anyone does buy this there's definitely a good chance of profit if you have enough bankroll but there is always a chance that you will lose everything because it is extremely hard to recover after 4-5 losses and you have to get extremely lucky or you will lose everything. Personally I've made around .4BTC with a script like this so good luck with sales.

The only thing different about it is the base bet which is the only thing I'm not sure about, everything else like finding the right multiplier to recover and making a profit in the same game is a public script.

Although it is mostly public if anyone does buy this there's definitely a good chance of profit if you have enough bankroll but there is always a chance that you will lose everything because it is

extremely hard to recover after 4-5 losses and you have to get extremely lucky or you will lose everything. Personally I've made around .4BTC with a script like this so good luck with sales. Totally incorrect. Nice try though. You don't understand the script at all. It's not Martingale.

Techius - November 17, 2016, 10:48 pm

I've decided to temporarily stop taking PayPal payments on this. This is still on sale though, and if you use BTC you get 10% off I believe!

My vouch:

I'm not trying to bash OP, I just want to give a fair review based on my experience.

I bought OP's script about a week ago and I've been using his strategy since. It's definitely the best bustabit script I've tried [simulating](#) with (it has the best potential ROI), and I've used several [different ones](#). And the best way I can describe it as is, a smart martingale strategy. But because gambling isn't sustainable, just like with any script/strategy, you will eventually go bust. Unless, of course, you cash out while you're on top and never come back. Over the past week I've sunk exactly \$520 CDN into bustabit, I would put in about \$100 CDN everyday, since I'd go bust the day before and need more money to try to win back what I lost. And only today, I've been able to snap out of it and realize that there's no way this will work. So in conclusion, this is the best bustabit script I've used, but it still doesn't change the parameters of gambling: the house always wins.

Proof of what? If I link you there is a risk that the method will get exposed and whatnot, and then people will try to make their own claims as to what it is. What matters more is the blockchain transaction history to show what goes in and what goes out.

Going to write a honest review tomorrow, still testing for now and already impressed with this. Totally worth it.

This script works perfectly but theres an advice to everyone:
You can find this online but it's going to be hard to find it, the script has been already in public since 2016.

Thanks for your review.

I guarantee you the script isn't online already though. What we did was build this and continuously changed the math until it was right, hence which is why I made the guide, to help explain the rationale to everyone who bought it.

Once again I do appreciate your review though :)

It's a script that's been calculated to safely bet your balance. It doesn't stupidly bet all of your balance as other scammy scripts do.
