Thread: [Change your images to HTTPS](#)

Omniscient - October 4, 2016, 12:05 pm

Due to the new standard of HTTPS for HF I'm going to ask that all members review their profiles and any paid stickies to ensure that they are using HTTPS instead of HTTP.

If you have an avatar URL and it's not HTTPS then it will be deleted.

If you have a signature IMG and it's not HTTPS then it will be deleted.

If you have a thread with IMG tags and the image isn't HTTPS then it will stop functioning.

I'm going to make the changes needed for us to be HTTPS strict so that all pages served will be 100% secured.

Get going now because I'm going to start my work immediately.

Elitas - October 4, 2016, 12:06 pm

Thanks for the heads up Omni!

M?xim - October 4, 2016, 12:07 pm

Thanks for the heads up. Will update my tutorial and profile then.

Elitas - October 4, 2016, 12:08 pm

(Oct 4, 2016 12:06 PM)AfterHours Wrote: [\[CITE\]](#) What is the reason to switch over to https only supported images?

I believe it will allow HackForums to be connected to https (port 443) which is a more secure port and will make HF a more trustworthy site.

Hackforums is now automatically connected to port 443 and has the green lock (HTTPS Connection) I see. Just in case anyone was confused about what Omni is talking about.

I guess so hackforums can be more secured, i heard using https is more safer than http.

It's not so black and white as you make it to seem, not at all.

J?son - October 4, 2016, 1:25 pm

Thank god imgur supports HTTPS.

Louis Vos - October 4, 2016, 1:27 pm

yo thanks Admin! I think my standard avatar is HTTPS isn't it :P

Omniscient - October 4, 2016, 1:32 pm

If you use the HF Gallery then it's automatically HTTPS.

If you use an uploaded avatar then it's automatically HTTPS.

If you use imgur then I will alter all signatures and avatars to support HTTPS.

If you use a remote URL that's not imgur or HTTPS then it will be deleted.

Yes thanks Admin. Maybe change your avatar huh ?

Anzee - October 4, 2016, 1:35 pm

Cloudflare has a few areas where you can rewrite URLs and create custom rules that would probably function well to simplify this.

I can see a lot of websites for products being sold here that aren't HTTPS being forced to implement it.

Good going.

Gt403cyl - October 4, 2016, 1:40 pm

I already updated most of my links/images accordingly, this is good move to help add security, I don't think it was a major risk but it also isn't going to hurt to be more secure.

M?xim - October 4, 2016, 1:43 pm

Omni your ava also needs an update I believe lol.

Neeeeeeeeeeel.- - October 4, 2016, 1:47 pm

Good going.Why they would need to support HTTPS? They can host their thread designs/ad signatures on imgur.

minimalist - October 4, 2016, 2:03 pm

You should add an red banner/alert to the top of every page so that the messages reaches more users.

Sharjah - October 4, 2016, 2:04 pm

Ah, knew HTTPS was coming to HF soon. Thanks for the update Omni ?

He should really do that and give some date that he will delete everything.

He is not deleting anything? The links without https will simple not work.

ZuGgY - October 4, 2016, 3:10 pm

Alrighty. Gonna go check now. Thanks.

Mi2414 - October 4, 2016, 3:11 pm

Will be looking over this in a bit, Thank you for letting me know!

Lufasu - October 4, 2016, 4:58 pm

Now i know where my last sig gone :)

Thanks for notice that , replaced.

Zexo - October 4, 2016, 4:59 pm

At work rn but will do it when I get home.

Evanescent - October 5, 2016, 1:40 am

Thanks for updating in, gotta start changing.

Prince™ - October 5, 2016, 2:28 am

Alright checked what I had to. I'm fine.

Millimeter Peter - October 5, 2016, 2:33 am

Thank you very much for the heads up.

Sift - October 5, 2016, 2:57 am

I think my avatar is https seems so.

Also thanks for informing us.

Not really. I have strong suspicions that CloudFlare may share their keys due to the CALEA law, and, as such, the HTTPS is just to fix the OCD of members.

Mario1 - *October 5, 2016, 11:09 am*

Don't really care, bruh. Thanks for telling me shit I genuinely don't care about.

Rubixa - *October 5, 2016, 11:14 am*

Omniscient - *November 13, 2018, 6:51 pm*

Bump because some of the work we did to for HTTPS was done during updates. If you have img mycode that's not parsing it's because the image link is not HTTPS.
