Thread: [Signature IMG tags require HTTPS](#)

Omniscient - October 4, 2016, 2:14 pm

All signatures with images that are non-HTTPS are deleted. If you had imgur.com images then I converted them. Otherwise the entire signature was deleted but only if you had an IMG tag in your signature that was non-HTTPS.

I believe my code is good to ensure that HTTPS is now required in signature IMG tags.

Members are welcome to test and lmk if they are able to add any IMG tags to their signatures that aren't HTTPS.

Thank you.

Gt403cyl - October 4, 2016, 2:15 pm

Already used https but thanks for the warning, hopefully people see it!!

Sharjah - October 4, 2016, 2:16 pm

Just tried adding it in HTTP, and it came up as a link. Looks good ?

NoodleBot™ - October 5, 2016, 1:56 pm

Thanks for the heads up. Wil have to update when home from work.

Lufasu - October 5, 2016, 2:41 pm

HTTP ones , showing a just the tags and links .
good job and thank you :)

Omniscient - October 5, 2016, 3:05 pm

The IMG tag no longer works at all unless it's https.

Forsen - October 5, 2016, 3:10 pm

(Oct 5, 2016 03:05 PM)Omniscient Wrote: [\[CITE\]](#) The IMG tag no longer works at all unless it's https.
Good job. Keep us safe :3

minimalist - October 5, 2016, 3:11 pm

i think it's pretty sweet that you've managed to turn hack forums into a near-100% https forum in just a few days, keep up the good work omniscient.

Omniscient - October 5, 2016, 3:25 pm

Quote:i think it's pretty sweet that you've managed to turn hack forums into a near-100% https forum in just a few days

We're not near-100%. We are 100%. Find a page that's not please and LMK.

nique ta mere - October 5, 2016, 3:27 pm

Regulus - October 5, 2016, 3:28 pm

Insanely good job Omniscient!
I'm glad you did this :)

minimalist - October 5, 2016, 3:57 pm

you've really outdone yourself omniscient ?

Devixx - October 5, 2016, 5:46 pm

This goes for Avatars too, yes? I changed mine and it told me it had to be an HTTPS url.

Omniscient - October 5, 2016, 5:51 pm

(Oct 5, 2016 05:46 PM)Devixx Wrote: [\[CITE\]](#) This goes for Avatars too, yes? I changed mine and it told me it had to be an HTTPS url.
Yes. Separate thread is here for that tidbit.

ra1d - October 5, 2016, 5:55 pm

(Oct 5, 2016 05:51 PM)Omniscient Wrote: [\[CITE\]](#) Yes. Separate thread is here for that tidbit.
Why did you even create separate threads, I mean keeping it all together would surely be more organized?
Not sure if I am missing something, or if you're just trying to take up as much space as possible so people don't miss your threads. ?

Welp I'm tired... half way into a 12-hour work shift. <.<

VirtualFrost - October 6, 2016, 5:08 am

Instead of creating a thread I thought I'd drop it here.

When you're editing your sig, if you put a http image link, the image shows correctly. I feel anyone who doesn't know about this might get confused as to why on the preview it shows, and once they accept the changes, their signature is broken under their posts. Hopefully that makes sense.

Yes, that's probably why it's working in preview. Unsure because the parser is set to only work with HTTPS. I'll try to see if I missed something in the code though.

Elitas - October 6, 2016, 11:27 am

Nice work Omni, thanks for turning HF to https.

Just wondering...

Most of the time the website shows as https but I just checked now and it says http instead, if this just cacheing or am I glitched? I recall clearing cache yesterday for HF, but maybe it was a couple days ago..

EDIT: Tested it...

Was showing every page as http until I visited the homepage (changed it to https) now every page has changed to http. Is this a port issue? It seems it's because I clicked the HF logo which is a https link so then it saved that as my default port to connect to HF?

Omniscient - October 6, 2016, 11:54 am

I'm not forcing HTTPS yet. Once you visit an HTTPS page you're in secure mode. So you're likely clicking bookmarks or caches pages in your browser.

All the static links on HF should be //hackforums.net now.

Elitas - October 6, 2016, 12:08 pm

OK thanks for the clarification. Love the https update!

bandors - October 8, 2016, 4:58 am

Oh, that's why my imgur sig wasn't updating

Leroy Jethro Gibbs - October 8, 2016, 8:15 am

Curious, does the HTTPS auto change when quoting code? Like I was to put a code with

Quote:

Does it autochange to

Quote:

I have seen this when using the code quoting but also have issues since the original code isn't suppose to have https enabled.

b?xxy - October 8, 2016, 8:28 am

Awesome, glad Imgur and Gyazo are https.

Omniscient - October 8, 2016, 12:42 pm

Quote:Curious, does the HTTPS auto change when quoting code? Like I was to put a code with
There is a Cloudflare setting which will change some non-HTTP links to HTTPS.

M?xim - October 10, 2016, 5:35 pm

(Oct 4, 2016 02:14 PM)Omniscient Wrote: [\[CITE\]](#) If you had imgur.com images then I converted them.

Hey Omni,

Noticed you did not do this for [Edit Signature](#), but you did it for posts and threads. It is nothing important or urgent. Just letting you know.

Edit (Imgur used): Tested it more. If I upload with http, it gets converted in the preview box and in your profile page, but not in actual posts and threads.

If I edit the link and add s to http, it works everywhere.

Night Fury - October 10, 2016, 7:20 pm

Is there any search engine that exclusively returns images with the https protocol? I've noticed that I'm having a much harder time sharing images, such as graphs in SRPP, because https isn't ubiquitous on the web. I may just have to develop a new habit of finding an image and then uploading it to imgur, but before I head that route, I thought it'd be worth asking for an easier way.

Thanks for reading.

Omniscient - October 11, 2016, 10:04 am

I'll have to look at the preview function.

mrnapolean1 - October 12, 2016, 1:37 pm

For those whom are wondering, Photobucket also supports https://.

Just have to add the s in the http.

Omniscient - October 12, 2016, 2:31 pm

Photobucket and a couple others use subdomains like 23.photobucket.com and 54.photobucket.com to serve their images directly. With those situations I can't simply add a MyBB word filter. I could probably write up a script to get it done permanently but just not sure it's worth the effort.

M?xim - October 12, 2016, 3:44 pm

(Oct 11, 2016 10:04 AM)Omniscient Wrote: [\[CITE\]](#) I'll have to look at the preview function.

Cheers. Noticed a user who had problem with uploading avatar, it does not auto-convert there aswell. [This](#) is the thread.

Not saying that it needs a fix, we have been notified that images only works as https. People

should know by now.

M?xim - October 21, 2016, 2:25 pm

When you make a new thread or post and click the image icon, it auto-fill in this "http://". Might be good to make it "https://". Seen lots of users fall for it and then the image(s) does not get displayed.

..Thinking about it, it might not help a lot. Maybe add a note after "Please enter the remote URL of the image you wish to insert.". Maybe have it in red for a while, till more people are aware of the https thing.

That might reduce the "why isnt my image working" threads. Just an idea.

Omniscient - October 22, 2016, 1:00 pm

Hmm...that's a good idea but requires a core edit. Let me see where it is.

EDIT: Done but the jscripts might be cached for a bit.

Your image host does not support https. Go with Imgur. Make sure to make it https, and not http.

You can test it by editing your link to https. If the image fails, the host does not support https.
