Thread: [BetterSeal! Free easy to use licensing system.](#)

sdk - October 4, 2016, 9:34 pm

Gold Update Released:

Change Logs

Spoiler ([Click to View](#))

Change Logs (v4.0.2, 8/12/17) Added 3 more socket servers for minimal down time and small load balancing

Fixed a bug on incorrect Gold Logins.

Change Logs (v4.0.1) Changed the structure to make it cleaner and more secure.

Minor Bug fixes with Server Response Mismatch

Added

GetUserVariable (Gets a user oriented variable, this is unique for each user)

SetUserVariable (Sets a user oriented variable, for use above)

Admin Functions

Generate License

Ban User

Unban User

(More to come in future updates, pm me on discord with suggestions)

Features Currently:

- Manual Ban
- Automatic HWID Bans (after 1 change)
- 5 Program Slots, 10 Users Slots for free.
- Complete user panel (Web, no need for downloading a program).

- Encrypted Data (in db)
- Custom End to End encryption
- Friendly Support (pm me for Skype, or just PM me here and discord)
- User Specific Variables (User Fields)
- Server Sided Variables.

Planned Features:

- Automatic updates (huge bug just disabled on the server for the moment)

I am open to any suggestions on features to add!

Link to panel: <https://betterseal.net/>

Tutorial can be found in the download page.

ForceJew - October 4, 2016, 9:51 pm

Damn, Looks great for now.

I hope the passes are hashed:)

sdk - October 4, 2016, 9:54 pm

(Oct 4, 2016 09:51 PM)FORC3FI3LD Wrote: [\[CITE\]](#) Damn, Looks great for now.

I hope the passes are hashed:)

Of course haha, releasing an update within the next hour with better Client encryption and server sided vars.

Added Server-Sided variables, any suggestions, please let me know.

Spoiler [\(Click to View\)](#)

Netw?rk - October 4, 2016, 11:39 pm

Better step-up your game aeon ?.

Nice release OP.

sdk - October 4, 2016, 11:42 pm

(Oct 4, 2016 11:39 PM)Netw?rk Wrote: [\[CITE\]](#) Better step-up your game aeon ?.

Nice release OP.

NetSeal still kinda shits on me, but hopefully I can get this out there and get everything working nice and tidy :)

Thanks tho man :D

Rageline - October 5, 2016, 2:32 am

Nice, domain name is kinda cringe.

Can you add API calls so that we can skin our own license window?

sdk - October 5, 2016, 2:36 am

(Oct 5, 2016 02:32 AM)Rageline Wrote: [\[CITE\]](#) Nice, domain name is kinda cringe.

Can you add API calls so that we can skin our own license window?

I might look into, but yea, buying a new domain soon, just saving up some money.

Rageline - October 5, 2016, 2:39 am

(Oct 5, 2016 02:36 AM)sdk? Wrote: [\[CITE\]](#) I might look into, but yea, buying a new domain soon, just saving up some money.

Remote web API would be best since that way we can't just return LOGIN_SUCCESS by patching Login function. We can write our own functions that are harder to RE ?

If you plan on adding web API I hope you add some kind of AES encryption too ?

sdk - October 5, 2016, 2:42 am

(Oct 5, 2016 02:39 AM)Rageline Wrote: [\[CITE\]](#) Remote web API would be best since that way we can't just return LOGIN_SUCCESS by patching Login function. We can write our own functions that are harder to RE ?

Yea, ill make something small tomorrow. Also just bought a new domain haha setting everything up :)

DopplerAF - October 5, 2016, 3:40 am

The name is really sick and funny too.

I can smell some awesomeness. Good Luck.

Rhez - October 5, 2016, 4:15 am

Hmmm. Let see if this thing can beat up the awesome NetSeal.

Good luck with this project, mate. ?

Cecilia - October 5, 2016, 6:22 am

ERROR for site owner:

Invalid domain for site key

I think you forgot to add your old domain on the recaptcha as well as your new one.

Ninja - October 5, 2016, 8:02 am

(Oct 4, 2016 11:39 PM)Netw?rk Wrote: [\[CITE\]](#) Better step-up your game aeon ?.

Nice release OP.

Netseal 3 is going to be that step-up. At least I hope...

@OP, remove that awkward smiley between the brackets.

(:)) doesn't work.

Streetlight. - October 5, 2016, 1:17 pm

If you want it to be better than netseal I suggest 20 free user slots. :D

EternityX - October 5, 2016, 1:38 pm

looks good so far

NetSeal definitely needs some competition

sdk - October 5, 2016, 3:48 pm

(Oct 6, 2016 04:26 PM)Streetlight. Wrote: [\[CITE\]](#) Can you make a .NET tutorial for setting it up? It's only for c#.

Dude, c# is .net as well as vb.net.

Moreover you could easily use an online converter if you fail to understand the c# code

Ninja - October 7, 2016, 9:58 am

(Oct 6, 2016 04:26 PM)Streetlight. Wrote: [\[CITE\]](#) Can you make a .NET tutorial for setting it up? It's only for c#.

You mean VB.net?

And if you know VB.net well you can read and understand C#.

EagleEye - October 7, 2016, 10:44 am

-mate you have to validate your license generator
-good job so far , everything is good but there is no validations on all forms its like you did it in fast way .

good luck bro for future

Ninja - October 7, 2016, 11:34 am

You really should get someone to test stuff before you publish it. As a programmer usually is not suited to test his own stuff.

You gotta assume the end user is a monkey who is going to do everything to ruin your website.

EagleEye - October 7, 2016, 11:38 am

(Oct 7, 2016 11:34 AM)Ninja Wrote: [\[CITE\]](#) You really should get someone to test stuff before you publish it. As a programmer usually is not suited to test his own stuff.

You gotta assume the end user is a monkey who is going to do everything to ruin your website.your are right 100% ,this was fast published without testing any validations ,he should take it down and do a retest on hes code

or he need to make it BETA testing mode all reports and bugs will be fixed in this version

sdk - October 7, 2016, 2:43 pm

It is in beta sorry for not emphasizing that, yea sorry wjat happened was I had a alpha that didn't look good but had all the missing features when I transfered over to the new design I forgot a list of stuff, I asked a few people to test but they don't really do much of this monkeying around, thanjs will fix all issues listed in the thread in the next few hours and make a push when I have time to monitor thanks for all the feedback.

Tee Plow - October 7, 2016, 3:03 pm

this looks dope mate good luck with your project

EagleEye - October 7, 2016, 4:25 pm

i can create unlimited licenses and applications with a bug algo concept

i dint buy Analytics

your Web algorithm need change if you need help just pm me ill help you buddy
keep it up

sdk - October 7, 2016, 11:19 pm

Terribly sorry, a register error has been around for the last few hours, release a fix! Sorry if anyone tried it and it didn't work!

Dentmen - October 10, 2016, 10:23 am

How do you actually even use it on vb.net trying to convert that C# tutorial atm lol

Ninja - October 10, 2016, 11:03 am

(Oct 10, 2016 10:23 AM)Dentmen Wrote: [\[CITE\]](#) How do you actually even use it on vb.net trying to convert that C# tutorial atm lol

Compile to a DLL and reference. Or just read C#. If you know VB.net, you can read C#.

ik vb.net but still cant convert it could someone help me please

Ninja - October 12, 2016, 8:45 am

I was able to register as a HTML element and it would display as such on the page once logging in.
I registered as:

and when I logged in I saw the image source of that element in the top left:
<http://prntscr.com/csz7wj>

This could be a huge security issue as I can put a persistent XSS vulnerability on the website and if you as an administrator scroll through a list of accounts and it contains me the XSS would be executed on your PC.

EDIT: Yep, I just registered as "<body onload='alert(0);'>" and now everytime I log in an alert pops up...

EDIT 2: <http://prntscr.com/csz9sq> really dude?

EDIT 3: aww come on <http://prntscr.com/cszak3> You obfuscated the DLL but not the strings in the DLL so the URLs are still there in plain text. And why do you store timeleft as a string instead of doing something like "ExpirationDate : DateTime"?

Aristocles - October 12, 2016, 1:16 pm

Yea, those weren't supposed to be up yet, added the new panel page because of some bugs.

(May 3, 2017 05:14 PM)JUSTIN Wrote: [\[CITE\]](#) Agreed, I can worry about my own client side code protection (or use NET Guard or smth), I want somebody to handle my licensing because it's annoying to implement xd

yea, I am changing to a WebAPI instead of clients needing a dll, to mainly enable better client protection.

(Apr 30, 2017 11:52 PM)???? Wrote: [\[CITE\]](#) How safe is this now; compared to when it was first released?

Semi safe, Nothing too major from what I've seen, if you provide some good client side protection you will be golden!

(May 1, 2017 02:19 AM).NETGuard Wrote: [\[CITE\]](#) see above post ?

Yea, there was a few issues that I forgot to address, Fixed a majority now.

(May 1, 2017 10:59 AM)Visual Freedom Wrote: [\[CITE\]](#) You ask about safety when .net can be cracked easy as well. As long as licensing works without bugs and without server hacks I would not complain. But such hacks should be fixed soon. (May 3, 2017 05:14 PM)JUSTIN Wrote: [\[CITE\]](#)

Agreed, I can worry about my own client side code protection (or use NET Guard or smth), I want somebody to handle my licensing because it's annoying to implement xd

Yea, moving to a WebAPI (instead of a DLL ref.) to allow clients better protection options.

(May 3, 2017 12:35 PM)???? Wrote: [\[CITE\]](#) Seems like the Account and Billing pages are down.

It leads to a 404(page does not exist) error.

Weird, those haven't been on the site in a while. (Weren't supposed to be there in the first place, left them on accident switching to a new panel due to bugs.)

ixfep - May 6, 2017, 5:49 am

Is the project still up to date? ?

CoderEX - May 6, 2017, 3:17 pm

As I was playing around with the application, it has come to my attention that I was able to bypass the login check using tools like Fiddler to edit the response of the response and trick the login check into thinking I successfully logged in.

Will there be any fix for this in the future?

sdk - May 6, 2017, 3:30 pm

(May 6, 2017 03:17 PM)???? Wrote: [\[CITE\]](#) As I was playing around with the application, it has come to my attention that I was able to bypass the login check using tools like Fiddler to edit the response

of the response and trick the login check into thinking I successfully logged in.

Will there be any fix for this in the future?

I already attempted to add something I suppose it didn't work? It works for me which is odd. But Im getting rid of the need of a DLL, its going to make clients implement their own protection as it's easier for everyone in the long run.

CoderEX - May 6, 2017, 3:52 pm

you shouldnt allow users to implement their own protection, most of them will fail miserably

you should use and force only https, that way it's a lot harder to edit the response
there are a lot more stuff you need to do

JUSTIN - May 7, 2017, 8:34 am

Make a web API for those who want to use it AND make your own version of the DLL which uses the web API you previously created. Trust me, it'll be a lot more convenient and expandable that way.

NA Riven - May 7, 2017, 8:36 am

Posting here to come back since I need this!

Thanks!

sdk - May 16, 2017, 7:58 pm

Just updated to the new DLL check it out and let me know, tried to make it easier for devs! [link](#)

0xBB - May 17, 2017, 9:01 am

Let's give this a try, looking good !

stefsot - May 17, 2017, 11:00 am

it's not very secure

I wrote a bypass as proof of concept, all you have to do is make the process load the dll regardless of the user's ofbuscation/protection

Spoiler ([Click to View](#))

Appreciate you spending your time but as of my above comment and ibennz comment it's a auth service not a assembly protection service, if people decide to release an unprotected assembly there's not logical way I cannot be at fault sad to say.

stefsot - May 17, 2017, 3:44 pm

Yet again, let me remind you of the purpose of this : licensing. Which is what I was looking for, keep track of who use what. Your point is not relevant to this purpose. Let me explain myself, I could easily "bypass" google ads track and show them how "flawed" their system is, yet the purpose isn't to be fail proof but to target ads onto a specific region. Does that make more sense ? Again , if @OP feels like security should be considered , I am sure he will contact you the first !

?

I might not be explaining the issue very well

let's say he is selling a lock

his lock is vulnerable and a master key for that lock can be created, which is what I did that master key can be used to unlock ANY door locked with that specific lock

my point is, the lock itself is fundamentally flawed

0xBB - May 17, 2017, 4:28 pm

Fair enough, From this point of view, you are correct. As for my purpose, this will do the work. Also, I've read that ubbelol is working on the "security" side of Netcense (or w/e orgy decided to call it), which sounds more of that "lock" you're speaking of (if you may read the features of it). That will be more suitable for you (and probably me too) to reverse and find flaws than this (again, not downing @OP's work, it does serve it's purpose). But I do understand your point.

?

sdk - May 17, 2017, 4:40 pm

I've considered security many times, but in the end its .NET, there will always be a way to mold the key. My opens are people either embed the assembly or use the public api I will be coming out with soon. Any .NET assembly can be modified and or cracked, it's the lay of the land, I decided to allow users to worry about said master key instead of me, so I can do my job and provide the authentication. I wish .NET was a bit more secure to be honest, but in the end if its a users program its self that gets cracked that's that, if it's the actual betterseal dll it's on me, hence why I want to goto a webapi or provided class for internal use.

sdk - May 19, 2017, 4:52 pm

I've decided to make it free and move onto other products, servers will be up as long as people use it!

Ninja - May 20, 2017, 12:39 pm

It's a licensing system, not a software security program so security doesn't exists as far as BetterSeal is concerned.

Shorta - June 3, 2017, 11:53 am

(Jun 3, 2017 05:55 AM)Martin Heidegger Wrote: [\[CITE\]](#) It's a licensing system, not a software security program so security doesn't exists as far as BetterSeal is concerned.
It's more in the way like, a dude doesn't just get to de-obfuscate my software locate betterseal in my software codes and change a simple url to his own or something like that and connect.

Aristocles - June 3, 2017, 12:00 pm

If they defeat your obfuscation they would be able to take most if not all (can't fully speak because I don't know how some other systems work) auth system off of your program regardless.

(Jun 3, 2017 12:00 PM)Martin Heidegger Wrote: [\[CITE\]](#) Well I think it works like that since BetterSeal doesn't handle the file but only the license associated with the user.

Yea not at the moment, I might do a small program check system in the future, but right now im working on more security with the Gold version, I believe I got it to a good standing so I am going to do similar features on Free, two key systems and what not. I was just planning to make an auth system for a few people and it turned out to be much bigger then I was seeing.

(Jun 3, 2017 03:12 PM)AccroHack Wrote: [\[CITE\]](#) How do you plane to make revenues while it's free ?

Right now my only income is anyone who buys Gold plan, which was a few but they all got the deal, atm its 10\$ a month for the best protected system I provide.

They are not, I try to message you and I get an error that I am not on your buddies list. But as I keep telling you sorry right now I cant help with VB.Net, you've gotten many suggestions in the thread.

Candy_sb - June 14, 2017, 7:47 pm

Tho its not that big of a deal, I'd appreciate it if you could contact me. I purchased all there was to offer in the earlier stage other than program slots. Auto updates, variables, unlimited license... only for it to go free for everyone, then removed for some of it to be added into the Gold Version.

I can't pm you, due to my account being new. But I'm surprised that you say its not your fault that I didnt purchase Gold when you offered discounts. But I purchased the features that you took away to be put into Gold. Why would I want to re-purchase what I already paid for. Glad I wasted money on features I can't even use.

sdk - June 14, 2017, 10:48 pm

I do apologize that I don't go onto your site 24/7 to see if the stuff I paid for is going to be taken away. Correction, I bought it a month ago, no where near the "nice extent" period...

If it's going to be this big of an issue, then I'll just leave it as this. Tho, I don't think blaming me for losing my features I paid for, simply because I didn't go onto your site after the features were already taken away from me was the greatest move. Even if I did, I'd just get a discount and have to spend more money on what I thought I already paid for. Seriously I think making a warning before you take away customers purchased features, or as you have done now the monthly payment. So people actually know when their features will be taken away. Not just taking them, without stating they will be removed in future updates. I understand I could've handled it better, so my bad. Good luck with the system anyway.

I didnt blame you I just said you missed out. I didnt put the fault on me because you are still experiencing the features? Updates are to be added back soon, and i will give you a month of Gold for free, message me on instagram (@teh_sdk)

Ninja - June 15, 2017, 8:51 am

What is it with everybody asking for VB.net support? Just put the C# code in a wrapper and then reference that...

How is the database and password storage? What hashing/encryption do you use for storing the passwords, or do you use plaintext?

Malum™ - June 15, 2017, 3:46 pm

I don't mean to sound crude but I just disassembled BetterSeal to take a look and the security features in it are rather bad. Here is just a few vague things since I really didn't spend as much time on this. You're just using JSON/Serialization and no encryption.

Since there is no encryption that means that emulation or patching assemblies is made easier.

You're using the bare minimum functions of the WebClient class.

The structure and naming conventions could be implemented in a more suitable and professional way.

Reading the hosts file won't do anything. There is much easier ways to emulate a server than using the hosts file.

There is better ways to retrieve the public IP address.

I mean this constructively.

sdk - June 15, 2017, 4:15 pm

I mean still use the build in BetterSeal form (for convenience sake) but not have it say BetterSeal login at the top. (If that's what you meant to ignore this :P)

btw are you using CPU ID in the HWID? For some reason on some PCs that seems to throw a NullReferenceException (happened with my own licensing system too) so in your UID method you should check for that and if it happens don't include the CPU ID in the HWID.

Pic of the error happening [\(Click to View\)](#)

Yea im looking at completely revamping the whole HWID situation. And ill look @ the custom text.

JUSTIN - June 21, 2017, 7:55 pm

Criticizations:

- Uses processor ID as HWID
- Can't get server-side variables without writing your own post request to replace the Seal.Authenticate() method and another post request for getting the variable names.
- Can't delete users, only ban/unban (why?!?!)
- No documentation about the actual methods/requests. (How can we check for incorrect HWID, username already taken, etc?)
- Expiration times aren't working at all for some reason, no matter what I set it as, the server returns the epoch time for a day from today. Really weird.
- Using the gold version's built in form crashed the program without reason. (I'm using VB, but I doubt that's why o_O)

Pros:

- It has a lot of potential :p

e: the following issue has been fixed :D

Example of expiration time not working. ([Click to View](#))

Code:

```
Code Dim UserInfo As LoginResponse = Seal.Login(usernameTextBox.Text, passwordTextBox.Text)
If UserInfo.status Then Console.WriteLine(UserInfo.time)Output: 1498102539
```

This output was ~5 minutes before me editing this post. It's epoch time, seconds from January 1st 1970 UTC. As you can see, the time is June 22nd at 3:35 am, which is the same time as now but 1 day ahead UTC time. No matter when the users sub actually expires, the server returns the epoch time one day from now exactly. Pretty weird bug, prevents the program from working entirely.

Why use HWID at all?

JUSTIN - June 21, 2017, 9:06 pm

(Jun 21, 2017 09:01 PM)Ninja Wrote: ([CITE](#)) Why use HWID at all?

If it's going to be a solution to .NET Licensing, of course there should be an option for HWID lock... It shouldn't be required though, maybe have a setting for it in the a program management panel or something.

Ninja - June 21, 2017, 9:23 pm

Why would you use an IP lock over a HWID? I'd rather lock my program to a users computer rather than their network. An option for both wouldn't be bad, I guess.

sdk - June 21, 2017, 9:46 pm

(Jun 21, 2017 09:01 PM)Ninja Wrote: [\[CITE\]](#) Why use HWID at all?
It's a more secure way to lock accounts from being shared.

A lot of people like to use VPNs, so not knowing that it locks IPs people could get their accounts banned, I plan to add a lot more features now that the webapi is out so I can try and make it usable for more then just programs you are selling, I want it to be a viable solution for users who might not know how to build a proper database but still need it for a project

JUSTIN - June 21, 2017, 11:35 pm

Yeah, I think most people would tend to agree that HWID Lock > IP Lock.

Btw, nifty code for getting expiration date, everyone:

C# - <http://pastebin.com/eaZv1sp9>

VB - <http://pastebin.com/uZM1B4X3>

OP, will there be proper documentation in the near future?

Does LoginResponse.status check expiration time/HWID too, or just if their account exists?

Also probably a good idea to let us set our own epoch time for their expiration.

sdk - June 22, 2017, 12:27 am

Also probably a good idea to let us set our own epoch time for their expiration.

I check HWID lock, expiration etc all then send info back status is mainly for if the request failed or not, status will always be true on unbanned unexpired accounts, fail on other errors and expired/banned accounts.

Proper documentation has been on the table for a while, I had XML docs in the lib but Obfuscation took it out, so I need to make a better wiki, ill probably do that sometime these next few days!

Why don't you put the C# code in a wrapper (DLL) so the people using VB can just reference it?

sdk - June 22, 2017, 2:04 pm

(Jun 22, 2017 01:52 PM)Ninja Wrote: [\[CITE\]](#) Why don't you put the C# code in a wrapper (DLL) so the people using VB can just reference it?

The free version is basically the WebAPI, but the point of the webapi is for them to make their own actual protection and all that so they can make it as secure as they want with no restrictions. I use a C# wrapper for everything, Gold and Free, the webapi is just that, a webapi. Some people have no issues actually referencing it in VB

Ninja - June 22, 2017, 2:09 pm

(Jun 22, 2017 02:04 PM)sdk? Just release it as a DLL if you haven't. If people then can't implement it they don't deserve to license a program (if they are selling it).

I fixed your main problem which was you making a GET request to something that only accepts POST, and this is the VB/.NET section, I cover .NET in general, a lot of people use it with VB.

OBV import BetterSeal2.dll and reference it..

Code Dim authed As Boolean = Seal.Authenticate("auth")

If authed Then

Dim lr As New LoginResponse("testinguser", "usertesting")

If lr.status Then

'USER IS LOGGED IN

Dim username As String = lr.username

Dim username2 As String = Seal.userInfo.username

Else

'FAILED SHOW ERROR WITH

Dim [error] As String = lr.info

End If

End If

The NewtonSoft JSON DLL is the file that requires the 4.5 .NET Framework.

What you can do is instead of using the provided DLL file, you can install the package through your package manager; which will install the corresponding DLL to match your Framework Version.

LustWare - July 13, 2017, 10:56 am

titanbullet - July 15, 2017, 4:45 pm

I also can't get vb.net to work with the free version. No matter what I do, I get False in user login. Here is my code:

```
Code Imports BetterSeal
Imports Newtonsoft.Json
Public Class login
```

```
Dim seal As New Seal()
```

```
Private Sub login_Load(sender As Object, e As EventArgs) Handles MyBase.Load
    Dim response As AuthResponse = seal.Authenticate("<Application Secret>")
    If Not response.status Then
        MsgBox("Authentication failed. Please try again.", MsgBoxStyle.Critical, "Authentication
Failed")
    End If
End Sub
```

```
Private Sub loginButton_Click(sender As Object, e As EventArgs) Handles loginButton.Click
    Dim login As LoginResponse = seal.Login(usernameBox.Text, passwordBox.Text)
    MsgBox(login.status)
    If Not login.status Then
        MsgBox("Failed")
    Else
        Dim mainform As New Form1
        mainform.Show()
        Me.Close()
    End If
End Sub
End Class
```

I obviously made a user in the panel, but the username appear as blank.

sdk - July 15, 2017, 7:42 pm

        MsgBox(login.status)
        If Not login.status Then
            MsgBox("Failed")
        Else
            Dim mainform As New Form1
            mainform.Show()
            Me.Close()
        End If
    End Sub
End Class
```

I obviously made a user in the panel, but the username appear as blank.
Yea working on a bug, use licenses please, sorry.

hunters - July 18, 2017, 7:57 pm

I have 0/999 licences and 0/999 programs left in my BetterSeal account. Now its only just 0/100 licences and 0/5 accounts left. ?? why automatically changed 999 to 100 and 5 ??

sdk - July 18, 2017, 8:39 pm

(Jul 18, 2017 07:57 PM)hunters Wrote: [\[CITE\]](#) I have 0/999 licences and 0/999 programs left in my BetterSeal account. Now its only just 0/100 licences and 0/5 accounts left. ?? why automatically changed 999 to 100 and 5 ??

Unlimited doesnt show 999, but it was all non gold got moved down to 100 for existing and 45 for new, pm if you actually bought unlimited (with proof e.g paypal email or transaction ID), ill give you Gold for free

hunters - July 18, 2017, 8:56 pm

i didn't buy the package. I was just register to betterseal.net and i got 999 license and application. 999 is not unlimited i know. I didn't said my account have unlimited option. :(

sdk - July 19, 2017, 9:46 am

(Jul 18, 2017 08:56 PM)hunters Wrote: [\[CITE\]](#) i didn't buy the package. I was just register to betterseal.net and i got 999 license and application. 999 is not unlimited i know. I didn't said my account have unlimited option. :(

I am confused on how you had 999, that's weird.

hunters - July 19, 2017, 11:37 am

ok sir. Leave it because i don't have any proof. When i register i got 999 but i don't know much about betterseal that time. I was just register onlyand i got 0/999 licences and users. But trust me its true.

JUSTIN - July 21, 2017, 2:12 pm

Any way to redeem a license key on an already existing account?

sdk - July 21, 2017, 8:18 pm

No problem! Thanks for buying Gold!

M00nD3v - July 28, 2017, 11:08 am

One suggestion for you and I am sure, you will like it. Please implement 2 Factor Authentication (2FA) via application like Google Authenticator or Authy etc while user logged in. This is very useful for developer and their customers. It helps to secure developer's account.

Regards

sdk - July 28, 2017, 11:27 am

Punkbastard - August 18, 2017, 7:55 am

What exactly is this custom end to end encryption? As I've always learned never to roll your own encryption algorithm, I'm curious what this means.

DeadKube - August 18, 2017, 5:11 pm

(Aug 18, 2017 07:55 AM)Punkbastard Wrote: [\[CITE\]](#) What exactly is this custom end to end encryption? As I've always learned never to roll your own encryption algorithm, I'm curious what this means.If I'm guessing, this is simply an encryption algorithm like aes used with a hardcoded string password or possibly generated password and this generation method is known by his server. He'll probably encrypt data that he'll send when connecting to his server in addition to SSL (I hope) in order to validate a license or something like that. No idea honestly. But yeah, apparantly security isn't what this should be used for anyway. Any MITM attacker would need access to that private key or the method for generation in order to decrypt the data sent to his server. Thing is though that the MITM attacker could just reverse engineer a sample of this system and get that key.

Hmm yes. However, to prevent a MITM attack I would just use SSL (TLS >1.2).

With SSL it's not possible to decrypt, as the private key (decryption key) is only known by the server. The data is encrypted with the public key (known to the public) and decrypted with the private key.

sdk - August 19, 2017, 10:24 am

There is not one key, the key for each request is different. Allowing it to be to be encrypted and decrypted on both sides safely, it's a modified known algo.

SNAKEGOTCHA - August 19, 2017, 3:25 pm
Good product. Thanks for the share.

korean - August 19, 2017, 3:28 pm

Vouch, perfect liscence system for VB AND C#. Like people have said you can't just add this to your app = uncrackable, you would need your own protection (obfuscation is just one).

SNAKEGOTCHA - August 19, 2017, 3:38 pm

Sounds so rude, and such behaviour is really strange as you are also the owner of a program, therefore you also know that errors might happen, and fixing those errors sure take some times ...

SIM-888979 - August 21, 2017, 11:12 am

Still:

Code <https://api.netsense.pw/auth/v4/get.php>

Just as easy to modify, stored in plaintext. I haven't followed it along but you should protect your endpoints with some kind of encrypted authentication token or something. Even if I didn't use this endpoint to bypass the validation for the list of links this gives me, I could use it to create a relay gateway that would provide you with the wrong IP.

As long as I can see and interact with your endpoints as any unauthenticated user this isn't as secure as it should be.

A quick look at the remaining strings and I can already guess what some of the url-queries might be:

Code get_status

set_status

get_program

set_program

get_info

set_info

get_uid

set_uid

get_username

set_username

get_lifetime

set_lifetime

get_time

set_time

get_level

set_level

drivers/etc/hosts

betterseal

netsense

auth

username

password

program

license

hwid

name

links

All one would need is a single example of a success response though as I can't see anything like a success token that would be validated from the JSON.

HawkEyeXXX - September 7, 2017, 9:59 am

Just need to know when will be fix Automatic Updates for Gold members? Its necessary instead adding new other features. Anyways good job!

Almost all of them are wrong besides the last group, but its a free licensing system when I provide a paid ontop? It's obviously not going to be up to snuff?

I know they won't be the exact same in the first, I was showing the full range of strings hoping that you knew the first few were getters and setters for properties within your code, rather than the actual string params for the URL, which are probably closely related to your code that formats the URL.

I'm just saying that your free version should be a good intro into what you're paying for, so rather than intentionally making it weak, IMO you should have brushed it up a bit more as an intro to the paid version if it's not the same thing with a few more features. People don't provide free things so that they can continue using that the entire time, they provide free things as a sample for what you might be paying for if you upgraded. For me - nothing truly stands out in the free version though, but that's my opinion based on my experience.

Before I release the next update any suggestions?

Dotexe - September 17, 2017, 11:15 am

sdk, i need to know how much this will be up for ? since you provide free package as well do you think you will be for a longtime on?

The service has been up ~95% of the time since January, as long as I can afford the servers the service will be up.

What seems to be the problem? Perhaps I can help you with setting things up.

The website seems to be fully functional; so I would assume the license system is still working.

Huge vouch! I've been using this for about 7+ months now. Very reliable guy and product.

American Ninja - December 15, 2017, 10:11 am

i was looking for something like this for a while now at last i m here on hack forums thanks for sharing this with coders
