Thread: [How I stole thousands of thousands of passwords](#)

tooleytoks - October 5, 2016, 1:45 pm

This 'story' is totally fictional... ?

* This story makes good use of Visual Basic (VB.net)

Okay, so the title is very self explanatory. This is about how I stole usernames & passwords from people with them having no knowledge at all. It was so basic that it was almost advanced, bad explanatory but yeah. Anyway, this was not flagged in any way by any Anti-Virus software, due to the nature of the 'virus'

I wouldn't like to call it a virus, as it isn't really. Its a simple .exe file which runs a script which runs another script which steals user data. Soooo, yeah not really a 'virus'

Okay so how did I do it?

Step1, I downloaded the application Browser Password Dump which is a standalone .exe to retrieve all Saved passwords from multiple browsers.

Step2, I made a fake but convincing application (I won't disclose what it was) & made a video all about it to post online

Step3, I made another silent .exe file that runs browser password dump (by this point I re-named it to BPD.exe)

Step4, I made the application force BPD to dump a plain file (no extension just blank) to the 'settings file of the other application i made) with a list of retrieved passwords

Step5, I made the second application wait approx 10 seconds and then import the file of passwords into a rich text box within the application itself

Step6, Then a web browser navigates to a weebly site (yes a weebly site) with just a form on it which I created.

Step7, on the timers tick it would take the text from the rich text box and add it to the form in the web page & submit it

Step8, The application would open a batch file, which kills this application and then deletes the .exe file leaving no evidence

step9, I check the received data and save the text to a file & now all that users information is mine...

This whole 'operation' was so basic & so easy to do, that's why I believe it to be so efficient and un-detectable from Anti-Virus programs

To cover up some stuff I mentioned earlier:

1- The fake .exe I made (lets call it exe1) was a real application that would function and do stuff, I made a folder where the .exe1 was called settings and added lots of real looking application info (settings, logs etc)

2- To launch exe2 I made a batch file in the same directory as exe1 which would simply launch the exe2

3- I used a weebly site as it was super simple to make and took a few minutes, apposed to setting up a server or something along the lines of that...

**If you want in-depth details just message me on here, I'll be happy to help

testpen101 - October 5, 2016, 1:46 pm

I almost went blind reading this.

tooleytoks - October 5, 2016, 1:47 pm

(Oct 5, 2016 01:46 PM)illuminatic Wrote: [\[CITE\]](#) I almost went blind reading this.
And why's that?

testpen101 - October 5, 2016, 1:48 pm

(Oct 5, 2016 01:47 PM)tooleytoks Wrote: [\[CITE\]](#) And why's that?
Too much spaces in between the lines.

Scy7e - October 5, 2016, 1:49 pm

It's really hard to read when the text is centered and there are too many unnecessary empty lines.

Enivois - October 5, 2016, 1:49 pm

Sorry bro, but illuminatic is right ?

tooleytoks - October 5, 2016, 1:58 pm

I'll fix the spacing now haha

Scy7e - October 5, 2016, 2:12 pm

Sooo much better. It's actually readable now.

TheWhiteHatter - October 5, 2016, 4:13 pm

Does it steal usernames along with passwords with the usernames along with the website of which the password and username came from?

swissexploited - October 5, 2016, 7:41 pm

"It's not a virus", it's just a program that "steals peoples data"- Well when you put it like that

Jeffexilelv - October 6, 2016, 10:29 am

Nice I really like the story! Thumb up!

citscloud - October 6, 2016, 12:44 pm

Wow, really fictional....

Spaddinho - October 9, 2016, 9:25 am

I will try this,thanks!!!

HornyPotter - October 9, 2016, 9:28 am

You could've simply just started a facebook application and you can still steal usernames and pws

?Criminal - October 9, 2016, 1:51 pm

Exfiltrating data with weebly, quite interesting leveraging a free service.

SIM-2580909 - October 9, 2016, 8:57 pm

If it doesnt still the password to their reffridgerator it doesnt count.

BIGSEXY - October 10, 2016, 2:41 am

What's the detection rate on this?

SchwererGustav - October 10, 2016, 4:17 am

it s actually steals cookies ...but good work though

tooleytoks - October 10, 2016, 6:45 am

(Oct 10, 2016 02:41 AM)BIGSEXY Wrote: [\[CITE\]](#) What's the detection rate on this?

I've tested with various anti-virus applications & none of them have detected anything!! I've scanned the .exe, the whole file & the .rar file & nothing!!!

I've even used Virustotal and It still doesn't come back with anything, so yeah its pretty good

pickashoe - October 10, 2016, 5:03 pm

Can you use this to find someone's gmail password?

tooleytoks - September 8, 2017, 8:13 am

(Oct 10, 2016 04:17 AM)SchwererGustav Wrote: [\[CITE\]](#) it s actually steals cookies ...but good work though

Sorry for gravedigging.

Well it doesn't though. I created the application, I believe I know how it works and what it steals. It does not steal cookies, It steals password & site info & sends it back to me

phenasty - September 8, 2017, 9:01 am

"It's not a virus", it's just a program that "steals peoples data"- Well when you put it like that

jedijingle - October 5, 2017, 2:25 am

How does it grab the passwords or data?
