Thread: [Add string/username search feature in reputation](#)

Plexcoo - *October 7, 2016, 4:31 am*

I think a search function for user reputation would be a very nice and useful feature to see. There could be 2 modules where it allows you to search for a certain string and another where you can search for a certain username who repped the user.

I see that we already have a few filters that we can use to search through reputation points but sometimes it can get a little inconvenient when trying to specifically search for something, especially with people who have 500 - 4000+ rep.
