Thread: [Hack School Grades PC Airmitage\(metasploit-gui\) Help!](#)

**SIM-2478232** - October 8, 2016, 10:25 pm

Some if the things i'm stuck with hacking schools network?  
school OS used  
laptops and desktops use Win10  
very few i dont know of use win7&xp(foundw/zenmap)  
CMD is not block

1:In airmitage(metasploit-gui) how would i able to infect window 7,8,8.1,10 without exporting an exe but just port forward like xp payload(ms08\_067\_netapi? does remote hacking local ip computer even work? Would i have to get newer payloads. Ima noob too. I am hacking i am trying to hack my teachers local PC at school, i am able to boot Kali Linux on usb live all the time(bootable).

2: how would i obtain or PINPOINT 1 computer local ip address (ex:192.168.1\*) there is over 50 PC connection to a wireless network via school laptop and some eth0 desktop in school library. endlessly scanning ports and host but cant find ones ip for a specific individual PC, By the way all of my teachers use laptops and connected on wifi, Windows 10 OS. The option i may have to do is manually go on their PC and "cmd-ipconfig"then good.

3: My idea of "hacking grades". Teachers manage grades through a website. I was thinking that i can do SET Cite Cloner+ DNS Spoof(using Ettercap)= credentials phishing attack. But if i where to DNS Spoof using Ettercap, how would i get then to click a spoof link so they can manage grades? But then i would need there local ip first?

Anyways I'm stuck with ideas any help.  
(please no:hack grades not good,risky,you'll get caught, just study!! etc)

First step is to gain access to any kitchen appliances,check in your schools kitchen to see if you can brute their refridgerator.

p.s wrong place to ask for help ;P
