Thread: [DDL Filehosting V1 - Discret file hosting](#)

prilux - October 9, 2016, 7:55 am

DDL Filehosting V1 is a list of discret file hosting sites, DDL means Direct Download.

DDL file Hosters, don't show advertising or popups and once you click in the link the download will start automatically.

Download:

http://www.mediafire.com/file/1gl3rb062vx5xfn/DDL_Filehosting_V1.rar

Virustotal:

<https://virustotal.com/en/file/5467d41c8b2a17199cbd434c30bd2cd1c65fc84a852a924f4e8b14829b875084/analysis/1476024643/>

Lante - October 9, 2016, 10:05 am

Why would you archive a list of file hosting sites? Just post the list instead.

prilux - October 10, 2016, 1:41 am

It's more easy for users to work!

EagleEye - October 11, 2016, 4:05 am

please please why all your posts not contains any image or details of the topic instead posting mediafire links

It's potential malware, that's why he posts virustotal links of the archived .RAR file and not the setup itself, and that's why he's been making multiple threads posting a useless tool that exists as a web tool already, see his previous made threads and his overall activity.

Sometimes i add an image, others i don't. It only depends on the time i want to waste with posting.

No, the forum rules explicit says to post a virustotal scan with the archives for download. (Not my rule) The files doesn't have potencial malware.

You can see in this thread that, because of today's crypters, a virustotal link is obsolete:

<https://hackforums.net/showthread.php?tid=5414178>

Omni also agreed that that section, as well as others, could use a rewrite.

This recommendation you're referring to in the [Help Docs](#) is outdated, and a scan on the archive rather than the actual application greatly reduces detection rates, on top of the fact that you're making applications out of things that don't have to be an application.

prilux - October 11, 2016, 9:55 am

Developers, developers, developers...

When you are developing, there is no such thing as a bad idea. There are ideas that are less valuable than others.

well first i agree with Lante

second when YOU ! create something and you want to show it to others and existed you don't SAY : " It only depends on the time i want to waste with posting."

well when i published my Service and give it away to other i was publish it with picture and tutorial and details and videos not like that!

you introduce your tools like useless tools , how you introduce your tools is how other trust you + more .

My Opinion !

prilux - October 12, 2016, 7:37 am

I already made tools with image, video tutorials and detailed information on how to use them.

They have been a success in the past, but they aren't anymore. In fact i did all the work to promote correctly when Omni decided to lock the threads to avoid grave digging.

Also i don't bet too much in HF because when it comes to money there are to many envious people here.

Specially the ones that says that it has malware, the world of computing and money don't move around a virus.

Why on earth will i publish a virus here? Where everyone knows how to make reverse engineering. Virus makers tend to target a particular type of individuals or use safe websites to spread.

The tool "DDL Filehosting V1" isn't a complex tool, is as much simple as it gets so don't expect a large promotion for a small product. The real deal here is provide visitors to the sites listed in "DDL Filehosting V1".
