Thread: [USB stick/SD card Double Memory](#)

NoTrollFromHere - *October 9, 2016, 2:57 pm*

hi guys,

this is how to double the capacity of your USB or SD card.

part 1:

connect your usb or sd card.

first verify if your usb or sd card is at full capacity.

search: cmd (execute as administrator)

type:

diskpart

list disk

(find your usb/sd card in the list)

select disk 1 (if 1 is your usb or sd card)

clean

create partition primary

list partition

select partition 1 (if 1 is your partition)

active

close your cmd line window.

go to My computer, find your usb or sd card , and right clic on it, format it as quick/fast format.

it should restore the normal capacity of your usb or sd card.

part 2:

download SDATA Tool (im not the uploader):

dailyuploads.net/kwcfads3djsw

start sdata tool.exe , select your usb or sd card

compress to: check the max GBytes you can. (16GBytes for me)

and click: E Compress NOW.

wait 3-5 minuts, done.

My SD card was at: 7,19 Go, now: 14,8Go

?

nice tut dude ,but make it more HQ ,you will get this advice along with the comments ,keep up the good work

NoTrollFromHere - *October 10, 2016, 8:39 am*

ok i'll make it more HQ, but it works

bankaiii65 - *October 12, 2016, 9:21 pm*

Could this not damage the sd card if I try to double it ?
