Thread: [My gaming laptop cant run most new games so i need a desktop](#)

LastSession VII - October 10, 2016, 4:18 pm

ASUS ROG GL552 15" Gaming Laptop (Intel Quad-Core i7-6700HQ/1TB HDD/12GB RAM/NVIDIA GeForce GTX960M)

I cant run most new games like overwatch, battlefield 1 ect in high/ultra

I live in Canada and I have \$1.5k USD, where should I order a computer?

Yin Yang - October 10, 2016, 4:19 pm

That's the same one that I have. Are you sure you can't run those games? It's a very strong and fast laptop. Maybe try updating your drivers.

LastSession VII - October 10, 2016, 4:22 pm

<http://www.systemrequirementslab.com/cyri> it says i cant even run the minimum requirements.....

and when im playing games like cs:go in high graphic, the computer get hot as fuck so i really need a desktop...

Breeze26509 - October 10, 2016, 4:23 pm

What's your budget in Canadian dollars?

i dont want to buy what ur using cuz it spread cancer on hf

Polomikey - October 10, 2016, 5:54 pm

You shouldn't get a gaming laptop if it isn't the new GTX 10-series laptops. You can get a nice build for 1.9k CAD from just building your own. Are you looking to play games like BF1 in ultra settings, overclock, etc?

d33l - October 10, 2016, 6:03 pm

thinkpad + desktop pc = masterrace

arshi3232 - October 10, 2016, 6:05 pm

I have a really good laptop that can run CSGO really Nicely (70-100 FPS) and My fan doesnt struggle. I can play on my laptop for like 7 hours straight and the speed of the fan wouldnt change.

straight and the speed of the fan wouldn't change.

The source-engine is made to run at 200+ fps for the smoothest experience.

Gt403cyl - October 10, 2016, 9:12 pm

For what it's worth OP, my ASUS G74SX laptop (i7-2630QM, 16gb DDR3, 3GB-560m) runs GTA V at 45fps on minimal settings 1080p.

I would think if it can do that a much newer should be able to run current games at minimal/medium settings.

Try it and see no harm in that.

LastSession VII - October 11, 2016, 8:49 am

Yes you will, it's surprisingly easy with a little bit of watching YouTube and some patients.
All components come with instructions and there are videos for most if not all of them if you are still unsure.

We are also here if you get stuck somewhere.

Vito Scaletta - October 11, 2016, 3:15 pm

Also the good feeling you get when you are done after all the troubleshootng and installing is amazing.

So totally with you on this one. Build it yourself or with a buddy.

LastSession VII - October 11, 2016, 3:20 pm

but i will most likely break somethings...

Nonon Jakuzure - October 11, 2016, 4:14 pm

(Oct 11, 2016 03:20 PM)vinkog4 Wrote: [\[CITE\]](#) but i will most likely break somethings...

If you can type on a keyboard you can build a PC. You barely need to screw things in. At most your PC would contain 12 screws.

Everything else you either place it in, pop it in, or plug it in.

wtf did u seriously -repd me lol

lol u had a bad day? hope u get more like these lmao????

d33l - October 11, 2016, 4:51 pm

Building a pc is grown man's lego, just look at a tutorial on youtube.

Every cable and part only fits one way, so it's impossible to fuck shit up.

LastSession VII - October 11, 2016, 5:20 pm

ik ima order the specs in 18 days (its when im getting the money)

d33l - October 11, 2016, 6:39 pm

(Oct 11, 2016 05:20 PM)vinkog4 Wrote: [\[CITE\]](#) ik ima order the specs in 18 days (its when im getting the money)

Then you have 18 days to learn how to build a computer.

Jay, linus, paul and barnacules (there's more people ikr) Have good guides and tips on how to build your computer.

<https://www.youtube.com/watch?v=k1Q8ksRI1Eo> for example.

And for christ's sake, read the manual

Don't be afraid, most new day tech is very userfriendly and it's hard to mess up.

Everything fits in only 1 place, don't force cables and such (except for the 24pin, it may require some force).

Try not to touch the components on the circuit board, and handle with care.

Make sure that the standoffs are mounted.

http://img1.shopimg.ca/content/zoom/21925165_main_zoom.jpeg

Don't build the pc on a carpet, try to avoid getting charged by electrostatic shit, touch a heater to ground yourself once in a while.

Make sure that everything is properly mounted and connected before attempting to power on.

AND FOR CHRIST'S SAKE, READ THE MANUAL

Cwikoffaf - October 11, 2016, 6:54 pm

You should get a new laptop with a 1060, they a good bang for buck.

d33l - October 11, 2016, 7:26 pm

I don't think you need to play CSGO on high, play on low, why high? The only thing you need on high is shaders.

Same with OW.
