Thread: [Crack hash? Which hash is this?](#)

**burdeloso** - October 11, 2016, 4:13 am

Hi guys,

I have hash:

7a9c034f50ff798dad121bb2f0ee2e040b6647f8f99213103e4ec9386f75b83d

And something named code:

85087

Which hash is this? And its possible to crack it?

Best regards mates :)

**Mr. Robot** - October 11, 2016, 4:15 am

What database is it from mate? Or private.

**tobuscus5001** - October 11, 2016, 4:24 am

This hash is double the lengt as MD5. It CAN be double MD5 encoded. And the "code" is called a salt.

So it prob is MD5\$hash.\$salt with double MD5. Not sure though!

**burdeloso** - October 11, 2016, 4:31 am

It's from new database, I cant contact via PM because of 25post limit

**tobuscus5001** - October 11, 2016, 4:33 am

You can identify the hash by using Kali Linux and opening a terminal and typing "hash-identifier"

**tobuscus5001** - October 11, 2016, 5:46 am

I will run hashcat on your hash. I will first try SHA-256.

Alright, it can probably be sha256(\$pass.\$salt).

For pass: 7a9c034f50ff798dad121bb2f0ee2e040b6647f8f99213103e4ec9386f75b83d

Salt: 85087
