Wondering if they really do work and if they are legit?

Not sure if it can be done with a key logger, but check out a thread Mr. Robot made about USB hacking.. and the other he made about doing it remotely.

Cheers

Mind elaborating? You can obviously put a keylogger on a usb, but I don't understand what you specifically mean.

That's not a keylogger, it just logs the browser passwords.

Ah, yes, those should work just fine; with limitations. Some don't work with some pcs, some do esc.,
