Thread: [Invest In CAD all time Low 1 CAD = 0.76 USD](#)

Seriously the title says it. If you invest in CAD now and you can make 5-25% in 2-5 months. It's a given. Or if you wait it out to cash out when it's par.

Simplified you buy CAD with USD at 0.76

3 months later CAD is at 0.86 USD you made 10 cents on your dollar

Seriously you can easily make 10 cents on your dollar in 2-4 months not joking.

Why invest into something just because it's low?

I live in Canada and I myself have never seen it fall below 70. Also it's only going to go up from here. Why take the risk. But I do think in the next two days it's going to go up one or two cents. Just how the candida. Economy works against Printed US cash.

I never said not to invest. Just saying investing in something just because it's at an all time low usually isn't good.

Agree with your point.

Not sure about investing now on Cad. I think that downtrend will continue till test 0.7 area. So it risky open long position now.
