Thread: [Website with free graphics in SVG file format?](#)

**Monostable555** - October 14, 2016, 11:02 am

Hi HF!

So I recently got access to a Vinyl Cutter and I wanted to get started with it, the problem I have is that I'm terrible with designing graphics and especially when I have to design it in vectors (The cutting software only uses SVG files). Normally I only design simple square shaped things in Ai like boxes, PC chassis, I've got access to an industrial 100W laser cutter.

Is there a free database for downloading free SVG files for vinyl cutters, I looked all around google but couldn't find one that allowed you to download in SVG files.

If anybody has some fun graphics in SVG format feel free to share them and I might just cut them out. I've got 6 m of sticky sided vinyl and 4 m of vinyl for t-shirt printing and I have no idea what to do with it all. ?

Thanks for any help!

do you have illustrator? , go to [freepik.com](#) or [all-free-download.com](#) .. download an AI file , open it then save as .SVG  
?
