Thread: [\[Help\] Deleting bad proxies from file](#)

xx1ben99xx - October 15, 2016, 1:34 pm

So I found a proxy checker I wanted to edit it to where I could delete faulty proxies if they didn't work from my textfile, but I have it select a random line from my textfile so I don't know how to delete it. I was thinking maybe searching for the proxy in the file and then deleting the line its on but have no idea how to do that?

PHP Code

```
<?php
def is_bad_proxy(pip):
try:
    proxy_handler = urllib2.ProxyHandler({'http': pip})
    opener = urllib2.build_opener(proxy_handler)
    opener.addheaders = [('User-agent', 'Mozilla/5.0')]
    urllib2.install_opener(opener)
    req=urllib2.Request('http://whatismyipaddress.com/')
    sock=urllib2.urlopen(req)
except urllib2.HTTPError, e:
    print 'Error code: ', e.code
    return e.code
except Exception, detail:
    print "ERROR:", detail
    return True
return False

def main():
    socket.setdefaulttimeout(120)
    proxyList = [random.choice(open('proxies.txt', 'r').readlines())]

for currentProxy in proxyList:
    if is_bad_proxy(currentProxy):
        print "Bad Proxy %s" % (currentProxy)
        #where i need to put the code where I delete the proxy
        main()
    else:
        print "%s is working" % (currentProxy)
        global currentProxy
```

You have them into a list, so i guess you just use the list.remove() to remove the proxy :)
