I meant to say, earlier, Romania, Germany and other countries were offshore and cool with their own law subjects but recently, they've merged with the agency and people are being busted over small issues.

I lost 100's of customers and almost 300+ Servers seized and taken down.

50+ were from Romania itself, therefore not trusting that country for BP next time. Lost around thousands, if being said.

It is never limited to any host. If the country issue a court order for any company, unless it is amazon AWS a multi-billion dollar network, your service is seriously going to end.

Back in my days, I used to have voxility but it went down. Now, I've switched to cyberbunker and runet.

Are you calling in the HF blazingfast or the actual .io one.

If it is the .io one, let me remind you, I got few customers who got banned after using phishing on those servers. If you are referring to the HF one, I doubt they allow phishing and actual blackhat content, except nulled scripts which is easy possible even with <http://www.hostinger.fr/> for free.

Phishing is Identity theft which is a crime anywhere.

You gave uncensored passport photo to a hackforums user? My god how stupid is that.. You should at least applied pixels to important parts before sending over.

Never ever send a copy of your passport as an image format.. It can be sold over for hundreds and instantly put into abuse. You can technically even take a loan with that photo.

I never thought I would say this, but you should've bought from aminode.. they don't require your passport lol.

Company lawyer is already doing that to report my passport stolen and abused.

And the process is being requested now internationally via Portugal PJ criminal investigation.

Anyone that handles a copy of that and its caught, you know my words.

This is a huge lie, excuses of DC asking for ID...

\$150 for a dedi with 10gbps? I think its your own fault, price is just too low.

(Oct 28, 2016 06:34 AM)Exitus Wrote: [\[CITE\]](#) \$150 for a dedi with 10gbps? I think its your own fault, price is just too low.

there are \$150 10g servers, with limited bw, i doubt it would be unlimited but at least spoofs, i can pay later for extra bw, there are known dc's with 10g port under 200\$

cant be 100% my fault, at least the 90\$ 1g port one didnt spoof, and its actually offline, he is not answering for 190\$-90\$ = 100\$ refund

Edit:

I was using shared power stresser for 3 years, I wanna run my stresser just for chinese market, so i was looking for spoofable servers

there is portuguese datacenter offering 900euros a month for dedicated spoofable and unlimited 1G unshared, talked to dc reseller ceo personally 1with 1 directly inside their datacenter office, which he clamied he can enable spoofing and turn egress filter off, bcp38 off. price for that is due to their uplink provider may ask or complaint.

basically for 900euro 1g unshared, for the price, he will ignore anything but child porn or classified content,any complain will be throw to rubbish bin

he also stated that if in future i get about more servers the price can drop to around 500 euro each, he is up to rent a full rack of servers and move the rest of servers to another datacenter location, this is due to harm hosting can overhealm their main router with high pps, they have another

customers in this dc, its totally not good to have a ghost datacenter mixed with legit customers.

his latest deal was 750 then raised 900 for final deal, direct cash only, i havent decided yet.

I think the price was a bit high.

Looks very nice!

May I pm you to work out a deal regarding paypal? (I buy prepaid mastercard/visa/amex credit cards from a local store, since I don't have access to bitcoin. I will gladly upload a scanned image of my receipt and proof of purchase for verification)

DONT, dude, i've no intentions to ruin his thread, paid 90\$ for 1 server which i used for 1 day, and then the server stopped working, cant' even ssh into it

he says spoofs, but it doesnt, its surely scam,

paid him 190\$ for nothing.

browse around HF, there are host's that spoofs, just buy directly from known DC.

he is scamming low rep ppl because "those can't complain" or "low rep ppl post can't be trusted"

maybe is he multi account or something to get rep himself

SCAMM, search around for his rep and scam reports.

I've more things to do aswell, to come here to report SCAM because i am pissed of of my 190\$ for his ass.

Stop buying servers from wannabe IT Tech bitches. Especially threads with titles like "(Their username) Servers". They're obviously using same server for everyone or charging more than actual host.

And they will continue to multi account and there is nothing you can do about it but complain lol.
