Thread: [School Wifi Greetz HF](#)

Ih2050 - October 19, 2016, 7:02 am

Greetings HF

Read this before reading the whole thread!!! (Poorly english xD)

In my school we use Wifi to do homework and task easier. I find this brilliant if there is a unknown definiton or a task i dont know at all i look it up at google! I love the way we can use internet do help our task and make schoolwork easier.

But there are always these stereotypes of students who abuse the opportunity to use the internet. They play games, watch netflix or talk on facebook etc. The teacher find out he then blocks the network for the entire class even tho some students are innocent. Ive tried to talk to my teacher about it, he says if someone abuse the internet the whole class will get the penalty, even tho i dont agree....

Anyways tried using Tor, Vpn, proxies, change mac adress, ip.

Info about the nettwork: each student on the school has hes on username and password. I think that is placed in Active Directory (AD). Note, when he blocks the internet he does only block it for his class not every student in the school. How i know tried using other Username and password in a diffrent class and i get Access to the internet, only problem i did that the first year not the 3d year so my friend is working now and not going on school... When they block the internet and go on google.com you get redirected to a page who says restricted access. I used burpsuite to see the datapackets but didnt understand anything but i link them under here.

<http://pastebin.com/ggE7d9EF>

Thx in advanced! ?
Greetz HF ?

Please correct me if you mean this shouldnt be posted in this section

pop.pop.ret - October 19, 2016, 7:57 am

how exactly did you manage to come to the conclusion that this post belongs in the 'Website and forum hacking' section?

Evanescent - October 19, 2016, 7:59 am

Just use Psiphon. It's a tunnel. Do not underestimate, just give a shot and you'd be surprised when you bypass the login screen too.

I will try tomorrow
i will post if it work or not ;)

Thanks in advanced anyway ?

Sorry if i'm out of the loop, got the flu and havent slept in awhile. Sounds like a group policy set for the distributions in Active directory.
