Why scan on nodistribute? Everything looks nice and all. and then nodistribute sounds fishy.

Then maybe scan where ever u think suits u...but can u elaborate on y no distribute is bad??...to my understanding...they dont distribute ur files as the name suggests.

Looks clean on VT too, but run in VM in case.

Yes, that's the issue. Why wouldn't you want someone to distribute your file, unless you embedded malware in it?

gulovepk31 - October 20, 2016, 6:54 pm

Thank you !!!!!!!!!!!!!!!

Jisatsu - October 20, 2016, 8:47 pm

I didn't get a chance to Sandboxie it, but even on VT it was clean. Was actually scanned a month ago, only thing that came up was the proxy scraper. And because only people who scan on nodistribute don't want their virus to be found. Sorry wasn't trying to bash, just looked fishy.
