Thread: [Let's mess with: Cyberseal](#)

Purple Kief - October 20, 2016, 10:31 am

Don't even recall what I said in this video, took way longer than I expected lol.

This'll show you how to crypt the paid RATs here. I don't have a # copy, might get one for the next video.

1m - 7:50m = Imminent Monitor

7:50 - 15:40 = Luminosity

15:40 - 24:45 = Orcus

24:45 - 31:00 = Nanocore

[Video: <https://www.youtube.com/watch?v=33VPGPD9W1Q&feature=youtu.be>]

End result & Notes

Spoiler ([Click to View](#))

Think I messed up the Orcus setup (don't laugh at me) will confirm my suspicions tomorrow and update the thread.

IM4 = Perfect

Luminosity = Perfect

Orcus = TBA. Check tomorrow.

Nanocore = Perfect

Shanonnn - October 20, 2016, 10:41 am

Good job man :) Orcus + CyberSeal works fine for me btw :o

Purple Kief - October 20, 2016, 10:42 am

(Oct 20, 2016 10:41 AM)Cubixx Wrote: [\[CITE\]](#) Good job man :) Orcus + CyberSeal works fine for me btw :o

Thanks, appreciate it. :)

I know, fairly certain I made a small mistake in the Orcus setup. (I really don't use Orcus at all)

Maybe I should prepare my next video a little bit.

If anyone has any suggestions do let me know. :)

Katarina Du Couteau - October 20, 2016, 10:44 am

Posting here to remind me of checking it out tomorrow

Thanks!

Reyyzan - October 20, 2016, 10:47 am

This is exactly what I need

Thanks man appreciated :)

Koopa. - October 20, 2016, 11:26 am

I'm looking forward to watching this, you should do one with Devil's crypter.

Millimeter Peter - October 20, 2016, 11:29 am

Hey Purple, hopefully you can answer my question, which RATs offer their service without enforcing their "legal" terms?

Armada - October 20, 2016, 12:12 pm

(Oct 20, 2016 10:42 AM)Purple Kief Wrote: [\[CITE\]](#) I really don't use Orcus at all
Being your one of the PAID tech support reps, this is good to know. ?

SIM-2580909 - October 20, 2016, 11:28 pm

Thanks for this HQ vid kief,

BTW, Im guessing the free minecraft download video on your channel is at least 100% legit ;P lol

Purple Kief - October 21, 2016, 10:24 am

Sure, got a code for the crypter anyway.

Gotta ask devil tho.

Orcus will be excluded from all future videos on 'request' of Armada.

Sorry guys, hope all of you enjoyed it so far tho. :)

CKkio23 - October 21, 2016, 11:51 am

Hey Kief this video really should me that you own to many dam rats.

Might as well start feeding them to a snake. ;)

but no seriously i have 2 and now i want to get nano core and IM :/

Nice video tho. Really show how much you have to mess with the settings on both the crypter and rat to get things right.

SIM-3100985 - October 21, 2016, 12:20 pm

CyberSeal seems like a great product, also this video kinda proves it.

Probably purchasing it in the future. Thanks for the heads up OP!

Autist - October 21, 2016, 3:23 pm

It takes hours to fud cyber seal, I recommend if you love trying to look for icons and assembly

?O?? - October 21, 2016, 7:04 pm

Nice Kief. showing off one of the best crypters with all rats!

Armada - October 21, 2016, 7:14 pm

Sorry guys, hope all of you enjoyed it so far tho. :)

Its not per request.

I offered you a choice....

lotzera123 - October 23, 2016, 7:06 am

i really dont like keif, but i think this is one of the most engaging videos, you seem like a pretty cool guy, and whoolaaa i just gave you 31mins of my life

Thanks for the TUT, quite practically informative!!

Onebyte - October 23, 2016, 8:03 am

Why this in this section should be in crypting section

SIM-2096295 - October 23, 2016, 12:13 pm

Using RAT software on Windows 10...hope you disabled the microsoft keylogger that it comes with.

Purple Kief - October 23, 2016, 2:16 pm

Thanks for the TUT, quite practically informative!!Alot of people misunderstand me, glad you can sorta see past it and enjoyed the video.

I'll be wasting more time of your life soon, providing I'm not lazy.

(Oct 23, 2016 08:03 AM)Onebyte Wrote: [\[CITE\]](#) Why this in this section should be in crypting section I asked myself the same question, couldn't really think of an answer.

Best answer would be is I'm showcasing RATs? Get over it, not like I'm shitposting.

(Oct 23, 2016 12:13 PM)Stuperb Wrote: [\[CITE\]](#) Using RAT software on Windows 10...hope you disabled the microsoft keylogger that it comes with.All good if you're not doing illegal things.
Stepped away from that life a while ago.

Thanks all of you for the comment, means a decent bunch to me.

Devil crypter coming up next.

(Oct 21, 2016 03:23 PM)Bart Allen Wrote: [\[CITE\]](#) It takes hours to fud cyber seal, I recommend if you love trying to look for icons and assemblyThis.

Back when I owned that shit product my desktop would be flooded with icons and stubs. Never going back again

sisnol - October 25, 2016, 12:40 pm

Exactly!! Cyber seal takes hours to get a file FUD. Sometimes i crypt over 120 times. Then again, uploading online to scan all the encrypted stub each time consumes most of my data. My license just expired and am glad. I need suggestions for a better crypter.

Respect to all the TUT you been putting up OP. But i don't think people misunderstand you, we have all seeing the bch in you. You can go suck a dk while you making your next video. That will be worth 30 minutes of my time. ??

Account of the Gods - October 25, 2016, 2:14 pm

your voice is sexy
@up
Imao what

if you added minute of scanning these stubs with runtime scanner would be lovely now its just fine

Purple Kief - October 30, 2016, 7:19 am

More sexy voice coming up soon.. ish

Orcus didnt work because you disabled where you want to INSTALL it... you disabled pretty much the whole installation tab by un ticking the top option basically in the installation tab it asks where you want to install... and you disabled the whole tab / installation so thats why it didnt work

Purple Kief - October 30, 2016, 11:05 am

(Oct 30, 2016 10:41 AM)ChaoticForce Wrote: [\[CITE\]](#) Orcus didnt work because you disabled where you want to INSTALL it... you disabled pretty much the whole installation tab by un ticking the top option basically in the installation tab it asks where you want to install... and you disabled the whole tab / installation so thats why it didnt work

No.. That is not why it didn't work, installation only makes a client reconnect after reboot, nothing more nothing less.

Can you imagine a builder that has a feature you could disable that'd break your connection? ?

ChaoticForce - October 30, 2016, 11:09 am

Just like the force administrator privileges for installer? yea I can imagine that a feature that doesnt

work ;)

lol I got to the point of the video where I see why it didnt work.. you forgot to add your IP address to the server?

Purple Kief - November 1, 2016, 5:58 am

(Oct 30, 2016 11:09 AM)ChaoticForce Wrote: [\[CITE\]](#) lol I got to the point of the video where I see why it didnt work.. you forgot to add your IP address to the server?

And we have a winner. ?

Honestly first time I set up Orcus like that, had no clue it wouldn't work. It's not like I forgot it was a step lol.
