Thread: [Tool for creating huge useful password lists!](#)

hsotaka - October 21, 2016, 2:08 am

Hi HF guys, ?

I want to introduce my password algorithm generator "L1ST1T".

If you ever have wondered how to get long useful password- or combolists for all the tools on HF, the answer is L1ST1T!

Quick Overview:

Spoiler ([Click to View](#))

See all details [here](#)!

Buy Basic Package [here](#) via BTC!

!!!Save 10\$ discount till 1st of December 2016!!!

Buy Premium Package [here](#) via BTC!

Giving away 3 Vouch Copies to Ub3rs, L33ts and 3p1cs! (pm)

Feel free to scan, decompile or whatever, you won't find any harmful code.

It just does what it does.

Enjoy!

If you have questions post them here or pm me any time! :)

Hey guys,

Still selling this awesome useful application.

PM me if you are l33t or ub3r and want a vouch copy :)

Run it on virtual machine and decompile it with dotpeek to check the source code.

I received a vouch copy from OP, this program works as advertised, it's very unique and I definitely would recommend it to anyone, doesn't matter who you are, this would be useful for anybody.

Vouch for this program GLWS hsotaka.

Yeah, everyone who uses tools with password lists need this application! :)

Thank you for testing and your vouch!

Still giving away a few vouch copies.

Thanks for your vouch! :)

Yeah it creates huge lists in just a few seconds!

Still developing on it, adding new features and optimizing the existing ones.

Save it till its cheap!!!

Imo the best feature ist the list modifier.

Small example:

Take a list with 100 words that are often used in passwords (huge lists with such words already included)

Then use the modifier and add 100 entries with the numbers 01 till 99 for each word in list.

This increases your changes of a matching password dramatically because structures like 'Xxx95' are one of the most used password algorithms ever!
