Thread: [color paragraph links?](#)

ApexDexterity - October 22, 2016, 8:52 am

Hi everyone. Im totally new to html, but i've been giving it a go these last few weeks. I'm just playing around and seeing what's possible to do.

I've run into a problem I hope you can help with.

I've made 3 mail links and placed them in a div called "color" and made it a class.

For 2 of the links I made them paragraphs and 1 I just kept a normal link.

In my CSS file i've said that I want all 3 links to have bold text and I only want the paragraph mail links to be green... BUT what actually happens is: The paragraph links get bold text, but the paragraph links get no color..

Can you guys help me out?

Thanks in advance ?

HTML Source:

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<meta charset="utf-8">
```

```
<link rel="stylesheet" type="text/css" href="style color.css" media="screen">
```

```
<head>
```

```
<title>TAB</title>
```

```
</head>
```

```
<body>
```

```
<div class="color">
```

```
<p><a href="mailto: helpsupport@gmail.com"> email contact 1</a></p>
```

```
<p><a href="mailto: helpsupport@gmail.com">email contact 2</a></p>
```

```
<a href="mailto: helpsupport@gmail.com">email contact 3</a>
```

```
</div>
```

```
</body>
```

```
</html>
```

CSS Source:

```
.color p{
```

```
color: green;
```

```
font-weight: bold;}
```

It's just some inherit issues you have.

If all of the links need to be bold then you'd need to specify that separately in the CSS like so:

Code `.color a{`

`font-weight: bold;`

`}`Then if you wanted to change just the paragraph anchors (links) then you'd need to specify it as such:

Code `.color p a{`

`color: green;`

`}`

thank you so much! It's been annoying me for a while. I didn't know you could specify your css classes that way.

Not a problem, guess you learn something new everyday :)
