Thread: [\[Nightmare\] Official RAT Helpdesk | Test Installs | Crypting/Building | Free](#)

AceVoid - October 23, 2016, 10:05 am

We are enlightenment to some, Nightmare to others.

UPDATE: It's a new year and time for new things! Since I am no longer part of the group Nightmare for a while now, I've decided to close this thread and focus on the future.

Anyone with issues are welcome to PM me of coarse! I'd be happy to help.

Welcome to Nightmare's official RAT Helpdesk.

Here you can ask any RAT related questions.

Help on the following topics will be provided: Crypting, Building stubs, Test Installs, Port Forwarding, VPN's.

Please note that no software or crypts will be provided, and no 'spreading' help will be given. We do not promote illegal activity.

Normal site rules apply when discussing your problem.

Quick Info:

General RAT Info:

Spoiler [\(Click to View\)](#)

- a RAT is software that allows you to remotely control a system as if you have physical access to the system.

- RATs are intended for legal use and are not to be used in malicious ways.

- Paid RATs will have HWID protection, meaning you cannot share your license with anyone else.

- RATs will be detected by Antivirus software unless the stub is crypted.

Crypter Info:

Spoiler [\(Click to View\)](#)

- a Crypter is software that encrypts software, generally to hide it from Antiviruses and provide protection against reverse engineering.
- Just as Antivirus software will consistently release updates, all crypters must also do the same to stay FUD.
- Scantime detection is when your stub gets detected by Antivirus software without it being executed. Runtime detection is when your stub gets detected by Antivirus software when executed. Scantime results are useless if the file is runtime detected.
- FUD stands for "Fully Undetected" and refers to a file being both scantime and runtime undetected.

Port Forward Info:

Spoiler ([Click to View](#))

- Check out <https://portforward.com/router.htm>
- Unless you're using a VPN, you will need access to your router to add ports.
- Use <http://www.canyouseeme.org/> to check if your port is forwarded (Note that you will need to have the RAT open and listening on that port whilst testing the port)

Issue: Can't portforward , I followed alot of guides all give same result (Timeout) , I am using 143 VPN and NO-IP (I know they log) Now I am instaling DuckDNS to see if it will make a difference.

1. I suggest using <http://www.dnsexit.com>
 2. Make sure all firewalls are disabled.
 3. Go to https://143vpn.com/panel/main_login.php
 4. Click 'port forwarding' at the top right.
 5. Input your port number
 6. To get your internal IP address go to run, cmd.exe, type in 'ipconfig', and search for the IPv4 Address starting with 10.8.
 7. Choose the server you're connected to and press the submit button.
 8. Go to <http://www.yougetsignal.com/tools/open-ports/>
 9. Enter your DNS name and port to check if the port is open
- Important: Make sure your RAT is open and listening on the specified port.

jjjjj100 - October 27, 2016, 2:27 pm

Hi thanks for the great thread, I request help please.

I have successfully setup Rat, tried Dark comet and njrat but njrat seems better. Everything works, connections fine when tested on own pc. Also purchased crypter which is supposed to be FUD but having problem with runtime detection as file gets deleted on execution when testing on another pc. Is the problem with the crypter, the RAT or something I'm overlooking. Also the pc I'm testing on isn't even up to date on antivirus yet still a problem. Thanks for any input.

AceVoid - October 27, 2016, 2:32 pm

Runtime detections are usually cause of the crypter. Wait a few days for an update. You can also PM me the name of the crypter you're using and I might be able to tell you if Im also getting runtime detections.

Also, have you tried crypting another RAT to see if you get runtime detection issues on a different RAT too?

jjjjj100 - October 27, 2016, 3:03 pm

Thanks Ace for quick response. I pm'd you the crypter name.

I did try it on 2 Rats the good old Dark comet and the arguably much better njrat. They seem to evade scan but deleted on execution. So any zero scantime result is pretty useless if runtime detected. Unless I'm overlooking other aspects...

? **[\$(1000)\$]** ? - October 27, 2016, 3:29 pm

Yes Deluxe Crypter is one of the best crypters here on HF! From the ones I tested it has the LONGEST of being FUD.

Purple Kief - October 27, 2016, 4:43 pm

(Oct 27, 2016 04:03 PM)? [\$(1000)\$] ? Wrote: [\[CITE\]](#) Yes Deluxe Crypter is one of the best crypters here on HF! From the ones I tested it has the LONGEST of being FUD.

You do know that FUD length does not make a good crypter right?

Runtime results and updates whenever a detection is found (however small-long that may be) is what makes a good crypter.

Nobody can do shit with a scantime FUD file that's FUD for a month.

2 days of a runtime FUD file, serious results can be made with that.

Please keep this in the back of your mind when advising crypters. ?

? [\$(1000)\$] ? - October 27, 2016, 4:58 pm

Im advertising the BEST crypters here on HF that I have tested...

Scantime FUD for both those crypters are always amazing (Usualy ONLY detected by ESET at the most)

Scantime means SHIT if runtime is not FUD

Deluxe is FUD Runtime execept for AVG! (Norton Sonar)

Kazy is FUD Runtime execept AVG AFTER start up! (Norton Sonar)

Trust me bro, I've been messing with crypters since 2006 I know exactly what Im talking about.

Those are the 2 best crypter on HACKFORUMS, that I have tested!

If the file is not mostly runtime FUD, then it is worthless...

(Thanks for the bump brother) ;)

jjjjj100 - October 29, 2016, 3:41 pm

Ok seeing you guys are so awesome in your service and helped with some good info last time,

here's another quick RAT question, network related. Does the type of internet connection on the client side make a difference regarding connection results i.e. if they are using 3g connection for example. Some have tried to suggest that internet/router settings etc. on the client side make a difference to getting connection. My understanding is that from the client side just internet connection is required (and of course a Fud server that bypasses antivirus and firewalls)

Account of the Gods - October 30, 2016, 4:13 am

which rat has fastest reverse proxy?

BottomNotch - October 30, 2016, 2:24 pm

RAT Name: IM4

Got a direct link: Yes

Glyco - October 30, 2016, 6:44 pm

I have a question. Often times I used to spread with the extension .pif I have gotten alot of people with it in the the past. But recently I have tried using that same method again, but I get messages from people who I am targetting that tell me the file does not open for them. What could the problem be?

AceVoid - October 30, 2016, 11:54 pm

(Oct 29, 2016 03:41 PM)jjjjj100 Wrote: [\[CITE\]](#) Ok seeing you guys are so awesome in your service and helped with some good info last time, here's another quick RAT question, network related. My understanding is that from the client side just internet connection is required (and of course a Fud server that bypasses antivirus and firewalls)

I agree with you that only an internet connection is required. Firewalls/ Anti viruses shouldnt be a problem if the stub is FUD as you've said.

I have nothing more to add.

What is the best free RAT that would be good to get unique installs?

AceVoid - November 15, 2016, 12:13 am

(Nov 14, 2016 12:29 PM)PetWussy Wrote: [\[CITE\]](#) What is the best free RAT that would be good to get unique installs?

I highly suggest you don't use a free RAT. Scrape up some spare cash and buy a decent RAT like ImminentMonitor or NanoCore RAT. You won't regret it.

Otherwise if you insist on using a free RAT, njRAT is most probably your best bet.

Jopemeister - November 15, 2016, 1:10 am

I got my crypt done, but the crypters startup did not work.

is it possible to enable startup after i crypted the file? i can not crypt again as the guy who crypted for me, does not respond :s

if this isnt possible, do you crypt?It's not possible to enable startup after crypting the file. Startup has to be enabled in the crypter's options.

I suggest you find someone else to crypt the file again for you as we do not provide free crypts,

sorry.

kingshakes - November 15, 2016, 5:13 am

Pls i need help setting up Jrat....Its a java rat.

AceVoid - November 15, 2016, 5:33 am

(Nov 15, 2016 06:13 AM)kingshakes Wrote: [\[CITE\]](#) Pls i need help setting up Jrat....Its a java rat.

Even if it's a java RAT you just need to follow the tutorials to set it up. All RATs work more or less the same. We are not going to set your RAT up for you; that said you may post here any time if you need help with something specific.

Dredd - November 15, 2016, 5:36 am

Really helpfull thread. ?

BlackPanth3R - November 16, 2016, 12:27 am

Is there any specific advantage of paid rats over free ones like quasar or dark track?

AceVoid - November 16, 2016, 2:33 am

(Nov 16, 2016 01:27 AM)kennytriplex Wrote: [\[CITE\]](#) Is there any specific advantage of paid rats over free ones like quasar or dark track?

Constant updates, meaning new features and bug fixes, and good support. You can assume that the stability of popular paid rats are far better than the free ones.

BlackPanth3R - November 16, 2016, 3:38 am

How possible is it to transfer your work from a free rat to a paid rat. And what's the steps to be taken?

AceVoid - November 16, 2016, 4:29 am

(Nov 16, 2016 04:38 AM)kennytriplex Wrote: [\[CITE\]](#) How possible is it to transfer your work from a free rat to a paid rat. And what's the steps to be taken?

Very easy (assuming the Free RAT has a download and execute function)

Just build a new stub with a new forwarded port with your new paid RAT, then upload and execute it on all of your existing slaves on your free RAT. Make sure the new port works and the new stub is crypted of course.

BlackPanth3R - November 16, 2016, 12:17 pm

Thanks. A lot. Will try this out

Killer_Keemstar - November 16, 2016, 1:37 pm

Hello

I used rats before but this time it won't work

i can't see my slaves

I port forwarded correctly check it on canyouseeme.org

I have my AV and fire walls disabled

I tried it on my own pc and i didn't get a connection
i don't what else i can do can you pls help

i tried darkcomet and darktrack

Have some issues with setting it up. Port forwarding and crypting should be fine but my second computer doesn't show up when I run it.

AceVoid - November 18, 2016, 8:09 am

(Nov 18, 2016 09:02 AM)Adroitness Wrote: [\[CITE\]](#) Have some issues with setting it up. Port forwarding and crypting should be fine but my second computer doesn't show up when I run it.

Its always better to test it on an external network. If you are 100% sure fort forwarding works post here asking for a test install and 1000dollarbill will PM you for the direct link. Please send an uncripted stub just to be sure, we can rule out what's causing the issue from there.

What R.A.T. do you recommend that does not monitor you and has gone "legit" ?

FunctionDev - December 3, 2016, 11:19 pm

Question. Do you guys do free crypts aswell? I just started getting into ratting and I cba to buy a 200 dollar fud at runtime crypter.

AceVoid - December 4, 2016, 4:35 am

(Dec 4, 2016 12:17 AM)Antonio80 Wrote: [\[CITE\]](#) What R.A.T. do you recommend that does not monitor you and has gone "legit" ?
Most of them being sold are going for the legal way as of recently.
Check out Nanocore and Imminent Monitor.

(Dec 4, 2016 12:19 AM)FunctionDev Wrote: [\[CITE\]](#) Question. Do you guys do free crypts aswell? I just started getting into ratting and I cba to buy a 200 dollar fud at runtime crypter.Nope sorry. Buy Kazy Krypter or Deluxe Crypter. Just my suggestion.

purest21 - December 4, 2016, 10:51 am

love this thread. how can UAC be bypassed? i crypt with clouddcrypter and i enable "elevate process" and "start up". then in the disablers i disable UAC, command prompt and task. but when i zip the crypted file and send to another computer where i test it and try to install, it will prompt the UAC message "do you want to allow the following program from an unknown publisher to make changes to this computer"

can you help on this? each windows start up it shows that same prompt. do you know if its clouddcrypter's fault cos i learnt UAC can be bypassed. thanks

kevy42 - December 4, 2016, 11:42 pm

PomfCat ses in there TOS that they do daily scans and will delete any malware...

lolbott - December 5, 2016, 12:36 am

Is there any tool besides RAT that have "Download and execute" option here on HF that you are aware of and if so is there any good one?
