Thread: [First real application I've coded outside of RATs, crypters, etc..](#)

Pharmacist - October 27, 2016, 9:56 pm

This was a requested application from a guy. I've been working on it a while, and I'm just about done.

Overview:

Uses SMTP to send SMS messages to a phone.

Images:

I haven't completed the carrier lookup.

But I'm proud of myself, coded completely from scratch, I didn't copy anything, it was all written by me. ?

Might be simple, I've really never worked on anything other than editing/fixing RATs or creating a crypter, which I don't really count as anything to be proud of.

Opinions?

good solid clean share rare you can market this easily add more automated functionality and baam you'll be cooking with hot grease in no time

Pikachu - October 27, 2016, 10:27 pm

looks pretty good, I've made a couple programs similar to this in the past, keep up the good work!

Very nice sir. There should be a showoff section on this forum because nothing is more motivating than a nice piece of software :).

Don't want to hi-jack your thread, but I also made a text-messaging app, but it uses a custom textnow.com API I wrote. Here's a screenshot:

Spoiler [\(Click to View\)](#)

Different design, but same operational logic.

I wonder how did you managed to get the rounded form.

Looks pretty nice OP, it's simple but you did a great job.

Never quit on the first opportunity, keep working hard!

Probably just the screenshot. But you can achieve this by drawing the form yourself.
