Thread: [Need to get one line each time the function is called, and each time it's called....](#)

Pharmacist - October 28, 2016, 4:07 am

I need to get one line at a time from a TextBox, and each time the function is called, it goes to the next line in the list of string in the TextBox.

Anyone help out with this?

Here you go maybe this will help you

```
Code Dim index as Integer = 0
Public Function ReadNextLine() As String
Return TextBox1.Lines(index).ToString
index += 1
End Function
```

```
Code Dim index as Integer = 0
Public Function ReadNextLine() As String
Return TextBox1.Lines(index).ToString
index += 1
End Function
```

I'm about to test it out.

If it works, I need your address to come kiss your ass.

edit:

Doesn't work, only gets the first line.

My mistake.. I called the return without ever adding the index. Here it is fixed now.

```
Code Dim index as Integer = 0
```

```
Public Function GetTextLineByLine() As String
Dim result = TextBox1.Lines(index).ToString
index = index + 1
Return result
End Function
```

Thanks for those who tried to help! I had a friend who fixed it in like 5 seconds over TeamViewer.. I've been working on this all night long.
