Thread: [Is there a way to get free inapp purchases?](#)

Taylorrr123 - October 30, 2016, 2:48 pm

Sorry if this is against the rules

I dont want to sound dum but is there anyway to hack an iphone to get free inapp purchases without jailbreak (ive got an iphone 5c 32bit)

RedWolf_009 - November 3, 2016, 7:52 pm

I could plainly say no but that answer isnt sufficient when one is trying to help the community.

In order to get some sort of free in app purchase :

1. You would either need to have the IPA decompiled, know where the hidden features are hiding and find a way to have it not verify with iTunes if the purchase was made.

OR

2. Have some sort of repository with In app purchased content on a server and have your app pull it from that server, of coarse these efforts are easily skirted with most apps of value having all their data managed server side.

If you feel interested in delving in to your own research, check out the android equivalent of on the fly patching with an APK called "Lucky Patcher" or "Freedom Patcher"

This app creates a modified Play Store with a modified Payment screen that reroutes the purchase request to it self , which it will automatically comply and reply with a receipt (No signature on purchase = means any server side checks will decline the purchase) This APK goes one step further by patching the APP to not check for signitures and to use the modified play store. SO In short, IF you had a jailbroken device. LocaliAPStore or IAPFree would be your go to tweaks, but those rely on a server that already cached previous paid content to deliver to whoever requests it.

IF YOU REALLY WANT FREE IN APP PURCHASE.

Purchase Something in game, spend or use credits and immediately file a refund from iTunes claiming it was accidently made to reverse the transaction, DO NOT CLAIM IT WAS FRAUD OR THEY WILL CLOSE YOUR ACCOUNT TEMPORARILY TO INVESTIGATE.

LocaliAPStore Cydia tweak is build to hack and bypass in-app purchases and allows users to install in-app paid application at no cost.

LocaliAPStore and other Cydia hacks such as iAPFree, iAP Cracker and iAPCrazy uses method to send fake receipt to the apps to install in-app purchase at free of cost.

Local iAP Store is Cydia tweak, so, basically, you need jailbroken iDevice to run it.

Jailbreak users use LocaliAPStore and such applications just for fun and to get free in-app purchases.

How to Install Local iAP Store on Your iPhone or iPad

The first thing, you need to do is, jailbreak your iPhone or iPad. Local iAPStore is Cydia tweak, so you must have Cydia installed on your iDevice.

Suppose, you have Cydia installed

Do you have added HYI repo? HackYouriPhone repo has latest version of LocaliAPStore iOS 10.1. If you didn't have HYI repo then add it first.

Add: <http://repo.hackyouriphone.org>

Once you have included HYI source in your source list, search exactly mentioned below...

Tap on search tab and type: "LocaliAPStore" and choose the listed app. You will see "Install" button at the right corner at navigation bar. Just hit it. Restart after installation.

Configure Local iAP Store app from your settings.

How to Use LocaliAPStore to get free in-app purchases

So, you have installed LocaliAPStore successfully.

Now, open it and enable app from settings.

Install any popular app or game that has in-app purchase.

Tap on that in-app purchase.

Click on cancel

Done, most of the time you'll get a free in-app purchase!
