Thread: [How do you spread your CRYPTED STUB.?](#)

Orange Kief - November 1, 2016, 5:36 am

So, we all know most of popular premium crypters here will suspend or terminate your license once they found out you scanned your encrypted stub into virus scanner sites that distributes to all other anti virus database. The thing is how can you spread your crypted stub when other people will surely scan on virustotal or virus scanner sites that distributes?

The Supreme Leader - November 1, 2016, 5:37 am

Honestly i've always thought about this too

I've always SE them into not scanning it

Koopa. - November 1, 2016, 5:39 am

Include a virus total scan of a fake different file next to the download link so they won't scan for it.

I used to do that and had no problems with people scanning my real stub.

That is 5% possible, because most people around the globe have been already influenced by online virus scanners.

sounds like a clever method, but what if they still re-scanned it?

eCoLoGy - November 1, 2016, 5:41 am

Because most of the crypters stub block the scanning sites that distribute so if you spread a crypted file for 500 people the crypted file blocks those sites in that computers making it harder for people to scan it.

Of course it doesn't make it 100% impossible as it's not difficult to lift the blocks but anyway that's it.

Mr. Robot - November 1, 2016, 5:42 am

Make it a .doc and spread through social media is always a good bet.

Torrents on popular subjects is another good one, you can make a .pdf/.doc with real copy pasted info with the exploit.

Spoof the file size to a txt file and change extension to a .mp4 then when it doesn't work, have a "codec" driver downloaded with it.

Some basic examples.

(I don't RAT without permission)

Once someone comes up as a client, update their server with a fresh stub so anyone else who has the file and scans it, wont affect the people who do run it.

True!

Can't argue with that. ?

I agree with setting up a .doc macro or silent exploit but some public exploits for .doc are not fully undetectable which will result into a useless waste of time and everyone could not invest on undetectable zero day exploits out there on the black market.

Zelpix - November 1, 2016, 10:13 am

Didn't pay attention to the nickname, came expecting a cool Purple Kief post
Obviously disappointed.

Congratz bro, ur smart.

Totally useless post and noone gives a fuck

Orange Kief - November 4, 2016, 10:57 am

Bumping this thread to get more information and advices.

Purple Kief - November 4, 2016, 10:58 am

Time and effort is the only way, unless you wanna pay \$ for an EK.

Nickname. - November 4, 2016, 5:01 pm

Simple get a crypter with unique stubs.
