Thread: [How to Dump databases faster than with Sqli Dumper](#)

ejshadow - November 3, 2016, 9:14 am

Right now I've found a db with 230k members using sqli dumper but from my experience I know it would take days to dump only user:pass (It took me 30hrs to dump a 50k one) using sqli dumper.

So how can I dump it faster? Do I have to use sqlmap or do it manually? (I know only the basics of manual sqli so I don't think I can handle it)

Thank you

ThatOneManInBlack - November 3, 2016, 10:17 pm

well I could help ya if you want, I may seem like a skid on here but I assure you im not ;P

you can use rdp to dump data on it since it take long time because your connection is bad so use good rdp with good connection and you can dump it fast this is too simple solution there is another way but more complex for you as i think

MauiBoi - November 4, 2016, 11:37 am

i agree with Mats0o0o0, RDP would be a good option for you.

Fun fact: It is running on a RDP that downloads 30mbps

Pluxo - November 4, 2016, 1:30 pm

Use an RDP, this is what me and my buddy do.

I am running it on a RDP...I just ran into a 3M db....I suppose in this case I would have to wait weeks :/

soft_boy - November 5, 2016, 7:26 am

Can some one give me a tutorial on this, i really need to get some data

xenxen - November 8, 2016, 11:05 am

Hello, I am looking for a pro to dump a few databases from a site, possibly without anybody noticing anything.

Payment is offered, amount and method may be negotiated.

No upfront payments, only payment after confirming that databases are copied fully.

Please PM me to discuss further and get the target site.

U can always use a python or perl script to dump the db'ses manually..

Those fuzzing scripts work well and dump fast.

2 year old thread mate

kcitrapp - March 28, 2018, 7:37 pm

I heard until this day, 2 years later, he's still manually dumping a database with 230k members
